

ALTERNATIVE
FUEL SYSTEMS

Prins

UNCOMPROMISED PERFORMANCE

The Prins VSI system is a unique development in the alternative fuels field. In co-operation with Keihin Corporation of Japan, one of the world's leading manufacturers of OEM fuel systems, we have developed this fully sequential system.

All the VSI components are CSA and ISO certified; the company's annual audits are conducted by TUV Netherlands and CSA International. Prins' QA/QC for crucial components is based on 100% testing prior to delivery.

The VSI system can be installed on all EFI/SEFI 4, 6, 8 and 10 cylinder engines ranging from 700cc to 8.1L.

**EPA CERTIFIED, ENVIRONMENT
CANADA TESTED**

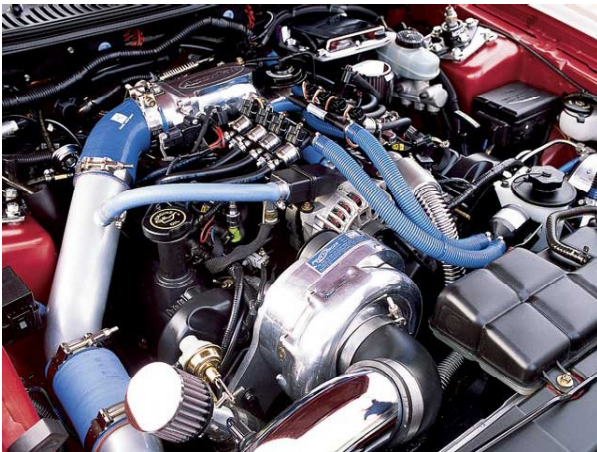

Prins is proud to offer VSI systems that are OEM certified, such as the systems installed by Chrysler Netherlands, Daimler Chrysler Mexico and Toyota Motor Poland.

Prins also offers a wide range of emissions-certified systems, which meet and exceed stringent standards such as **Euro-4 and USA EPA.**

All of our emissions tests in Canada are performed at Environment Canada.

FIRST IN CLASS TECHNOLOGY

Prins has one of the largest distributor networks worldwide, and is also the sole distributor for Keihin gaseous fuel injectors. For more information on the complete Prins product line please visit our Canadian Authorized Distributor Max-Quip Inc.
