**FOR EXPLANATION AND CIRCUIT DIAGRAMS SEE : INSTALLATION MANUAL GENERAL PART 1 / 2**

## General instructions

- The installation of the system shall be done in accordance with the installation manual provided by Prins Autogassystemen.
- This manual is based on Dutch regulations, always install the system in accordance to the local regulations.
- For an optimal functioning of the Direct LiquiMax Gen3 system, maintain a clean and organized work environment during installation and maintenance to prevent pollution of the LPG components.
- Always download the "general manual 1/2" from our [website](#) for basic instructions and diagrams.
- When working on the car, beware of moving and rotating parts in the engine compartment ( even when the engine is not running !! ).
- Always **disconnect the battery when installing / servicing** the LPG system. Make sure the ignition key is outside the car. Be aware of central door locking, radio / telephone memory code, alarm system.
- Wear safety goggles when working on the petrol filled system / connections ( pressurized petrol )
- Do not place the main fuse into the fuse holder before having completed the installation of the system.
- The AFC has to be activated by means of the Prins diagnosis software.
- Never disconnect the AFC connector, unless you have removed the main fuse.
- When installing the wiring harness, ensure that it does not run near any of the ignition components.

Solder and insulate all electrical connections.

The wires in the loom are provided with numbers and text. The text on the wire explains the function of the wire.

The wire harness is not model specific, therefore it may be necessary to adjust the length of the wires.

Ensure maximum care is taken when connecting wiring.

Make professional joints using solder and shrink sleeve. Do not stretch the wiring harness.

- No component of the LPG-system shall be located within 100 mm of the exhaust or similar heat source, unless such components are adequately shielded against heat.
- If holes have to be drilled (wear safety glasses) for installing brackets, etc., the drilled holes must always be treated with an anti-corrosion agent, after the debris has been removed (especially when mounting an exterior filler into body work).
- After having completed the installation, check the whole system for LPG leakage; use a gas leak detection device. Also check for leak of engine coolant, petrol and air.
- Fitting and maintenance is only allowed by Prins Autogassystemen selected LPG engineers.
- Failure to follow the instructions in this manual can result in a poor or non-working LPG installation or a dangerous situation.
- For maintenance instructions see owner's manual.
- Prins Autogassystemen is not responsible for any damages to people or objects as a result of changes to Prins products.
- [Check our website regularly for diagrams, certificates, updates, info-bulletins and product information.](#)

Register the system (with warranty card) on the [Prins warranty portal](#) within 14 days after installation.

## Required equipment / tools / materials for installing a complete system

- Complete workshop toolbox (wrenches, screwdrivers, cutters, pliers, ratchet, sockets)
- Car lift
- Portable computer
- Vehicle fuel system scan tool or OBD scan tool Prins (part no. 099/99928)
- Exhaust gas analyzer
- Multimeter
- Oscilloscope
- Prins diagnostic software
- Prins Diagnostic Tool
- Torque wrench (5-50Nm)
- Torque wrench (200-250Nm)
- Portable light
- Assortment drill bits Ø4 to 12 mm
- Assortment cutters (Ø20, 30, 50, 70 mm)
- Portable drill or pneumatic drill
- Thread cutting device (male M6x1, M8x1, M10x1)
- Air gun
- Vacuum cleaner
- Safety goggles
- Hot air gun
- Soldering iron, soldering tin
- Wire-stripping pliers
- Adhesive tape
- Adhesive sealant
- Thread locking compound
- Anti-corrosion agent / black body coating
- Gas leak detection device or foam leak spray
- Shrink sleeves

### Vehicle check

- Check the vehicle drivability on petrol
- Check the fuel system for error codes (scan tool)
- Check if the catalytic converter is in good condition (exhaust gas analyser)
- Check the condition of the ignition system (spark plugs, cables, coil)

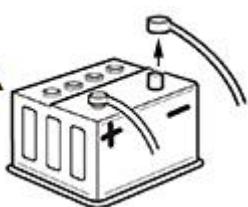

## Tightening moments

	Nm	Spanner mm
M 5 x 0,8	6.5	8
M 6 x 1,0	11.3	10
M 8 x 1,25	27.3	13
M 10 x 1,5	54	15-16-17
Banjo bolt	10	14
Supply line connection tank	15	13
Fuel module Allen bolts tank	20	7
Filler hose connection tank	50	22
Boost pump M6 mounting bolts	10	10
FMU M6 mounting bolts	10	10
High pressure petrol fuel line	24-35	17
Quick release	20	19

### EXPLANATION OF SYMBOLS:

= IMPORTANT, CAUTION

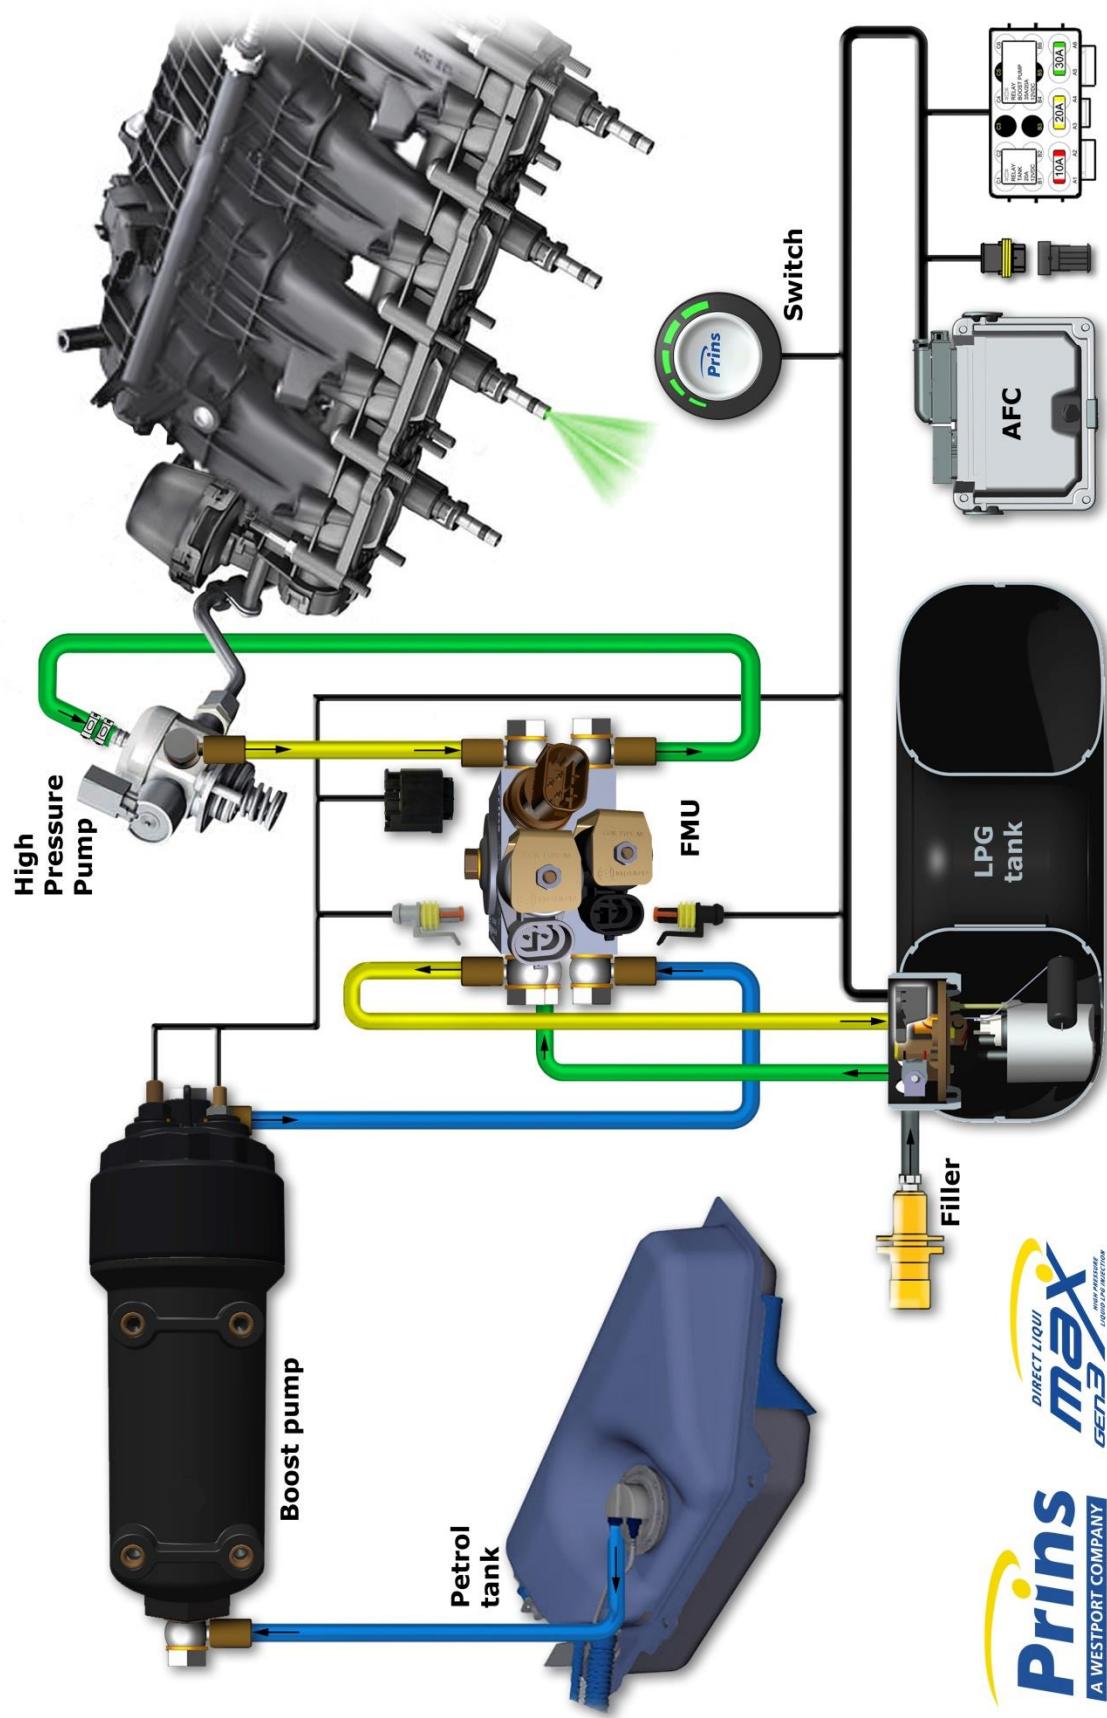

= WEAR SAFETY GOGGLES

**Direct LiquiMax parts / approval numbers**

Fuel Management Unit : E4-67R-010269	Boost pump
Prins AFC: E4-67R-010098 E4-10R-030507	High Pressure Pump : E4-67R-010266 High Pressure Rail : E4-67R-010267 High Pressure Injectors : E4-67R-010309
	Fuel lines XD-series : E4-67R-010247

## Overview DLM Direct Injection

**Fuel Management Unit connections**

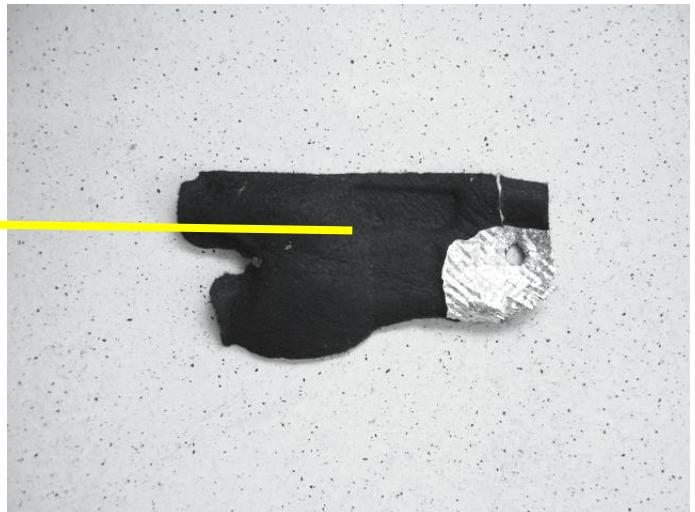

**Fuel Management Unit**

**Boost pump**

**DLM component location overview**

**Preparation, remove wiper box**

## Preparation

Cut away fabric.

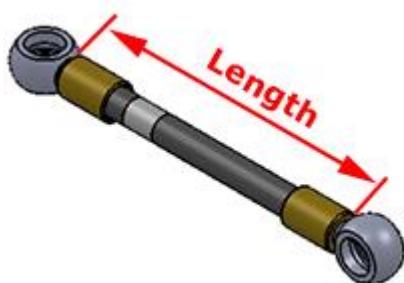

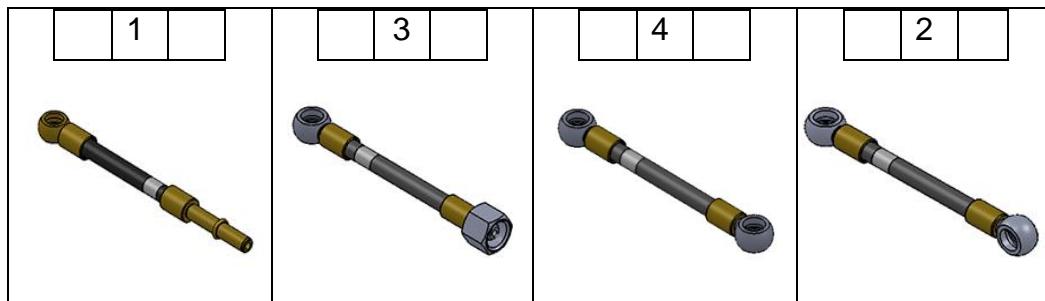

## Preparation

Remove glove compartment

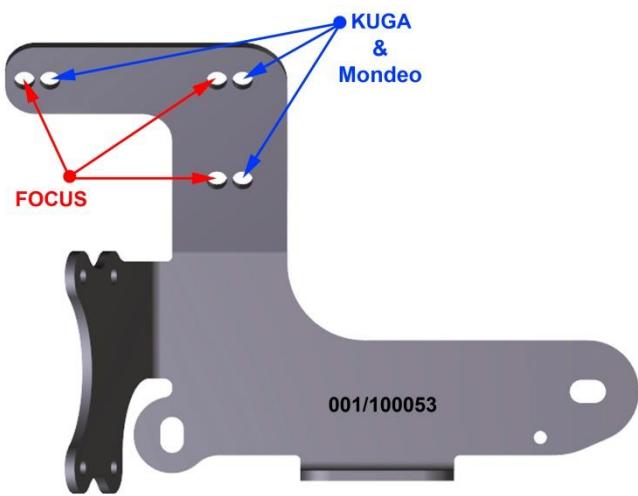

**LPG / petrol fuel lines**

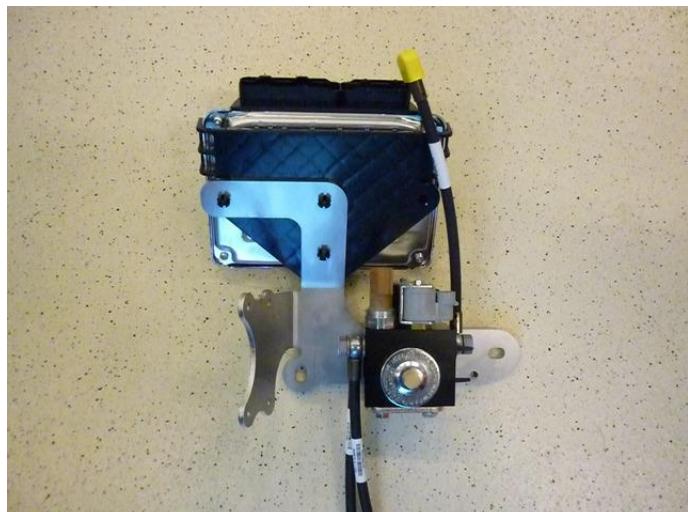

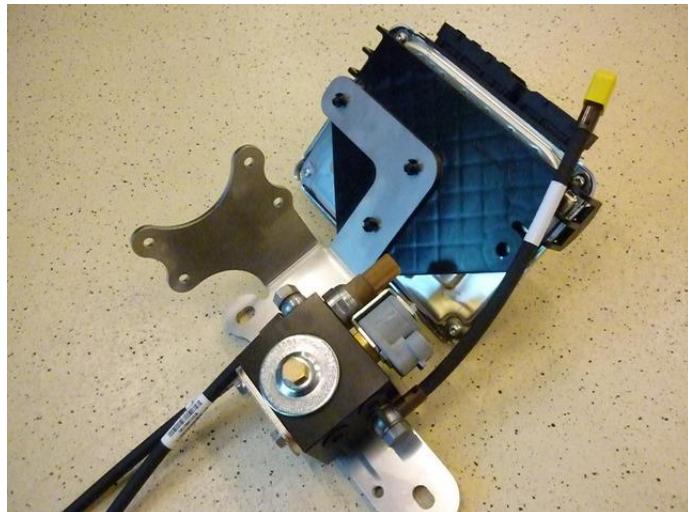

Hose	from	to	Length ( cm )
1 XD-4	Adapter original petrol hose	Boost pump in	100
2 XD-3	Boost pump out	FMU petrol supply	20
3 XD-3	FMU HPP supply	High pressure pump	75
4 XD-3	High pressure pump	FMU HPP return	115

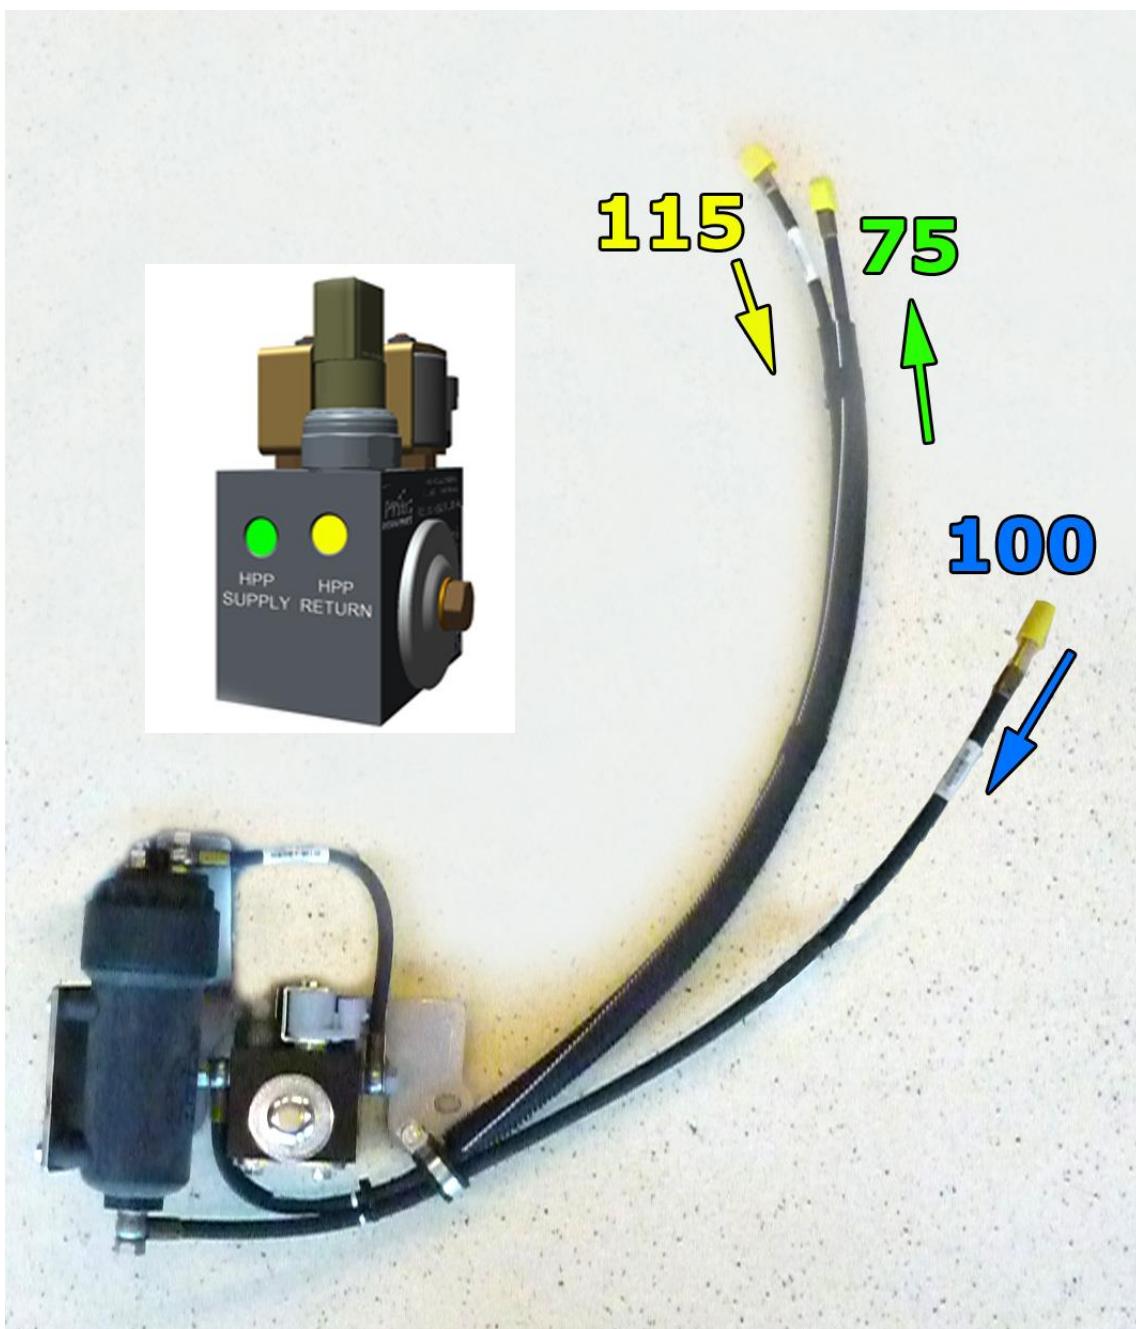

Install the fuel line using two bonded seal washers and banjo bolt :

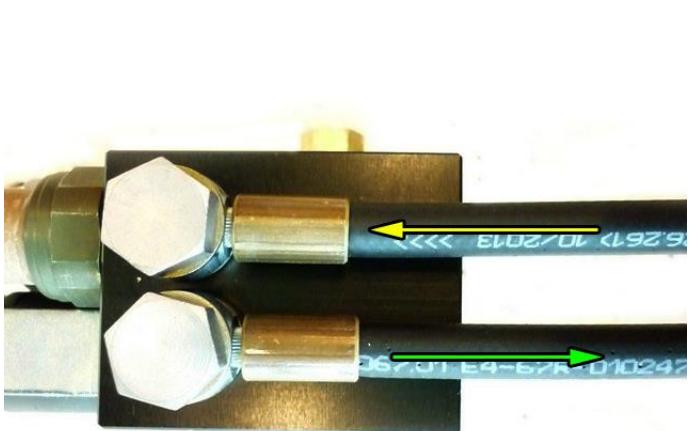

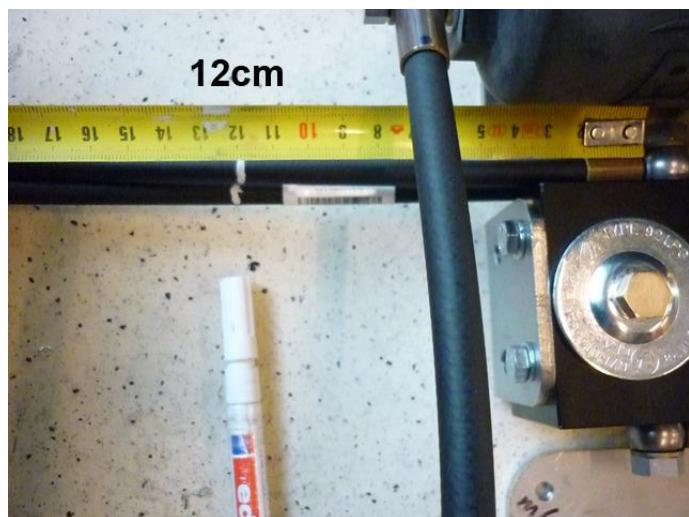

**FMU / AFC assy**

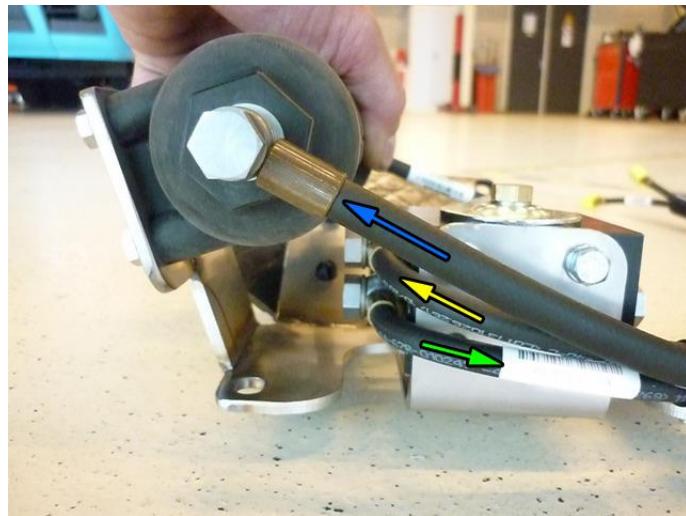

**Assembly with boost pump**

**Assembly with boost pump**

### Hose Assembly with boost pump

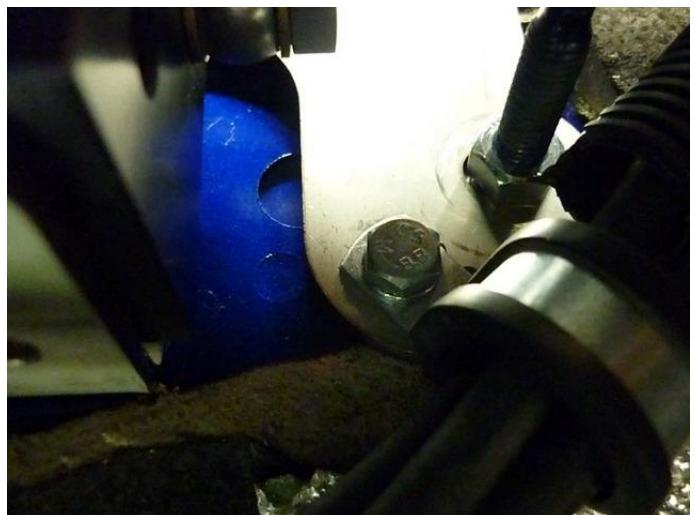

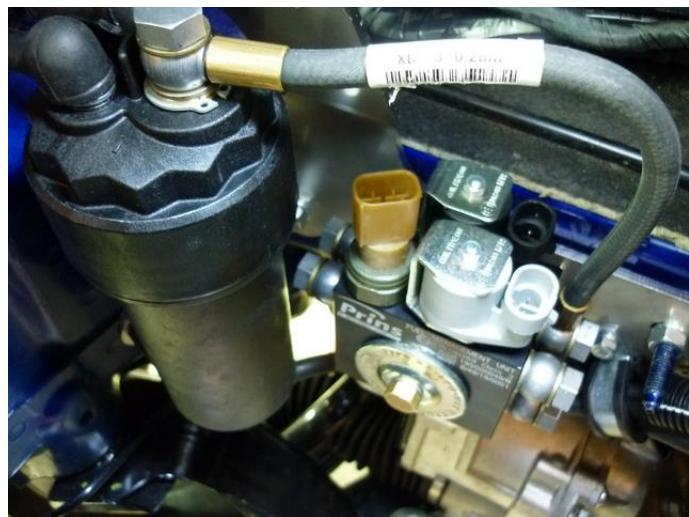

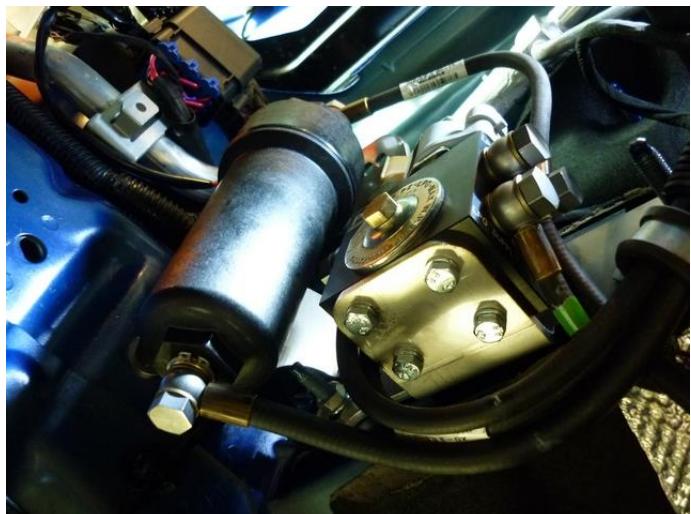

## Hose assembly with boost pump

## Assembly installation

Remove under engine cover.  
Installation assembly from underneath the vehicle.

**Assembly installation**

## Removal of the High Pressure Petrol Pump

### -REMOVAL-

### -WARNING-

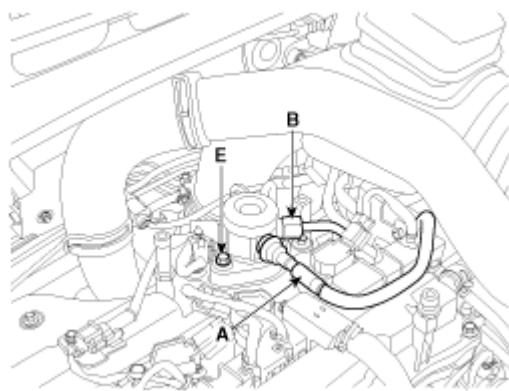

In case of removing the high pressure fuel pump, high pressure fuel pipe, delivery pipe, there may be injury caused by leakage of the high pressure fuel.

Don't do any repair work right after engine stops (HOT engine).

- Turn the ignition switch OFF and disconnect the battery negative (-) cable.
- Wear safety goggles.
- Disconnect the fuel pressure regulator valve connector
- Disconnect the High Pressure fuel feed pipe (B)
- Remove the Low Pressure fuel pipe / hose (A).
- Remove the installation bolts (E), and then remove the high pressure fuel pump from the cylinder head assembly.

### CAUTION:

Unscrew in turn the two bolts in small steps (0.5 turns). In case of fully unscrewing one of the two bolts with the other bolt installed, the housing surface of the cylinder head may break because of tension of the pump spring.

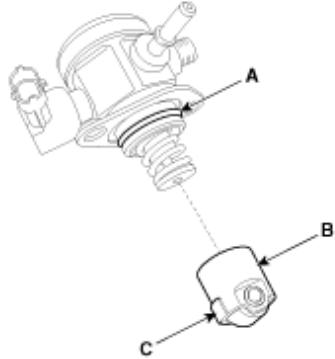

**CAREFULLY** store the removed petrol pump. Make sure no pollution can come into the pump.

## Installation of the High Pressure Petrol Pump

### **-INSTALLATION-**

Before installing the high pressure fuel pump, position the roller tappet ( **B&C** ) in the lowest position by rotating the crankshaft. Otherwise the installation bolts may be broken because of tension of the pump spring.

Apply engine oil to the O-ring ( **A** ) of the high pressure fuel pump, the roller tappet ( **B** ), and the protrusion ( **C** ). ( roller tappet, only if removed from cylinder head )  
Also apply engine oil to the groove on the location where the protrusion ( **C** ) is installed.

#### **Installation bolts:**

When tightening the installation bolts of the high pressure fuel pump, tighten and turn the bolts in small step (0.5 turns) after tightening them with hand-screwed torque.

**High pressure petrol pump installation bolt:** 12.8 ~ 14.7 Nm.

#### **Petrol pipe:**

First hand-tighten the nut(s) fully until they are not fastened any more in order to have them inserted in place and then completely tighten to the specified torque using a torque wrench.

If not tightening the bolts or nuts in a straight line with the mating bolt holes or fittings, it may cause a fuel leak due to broken threads.

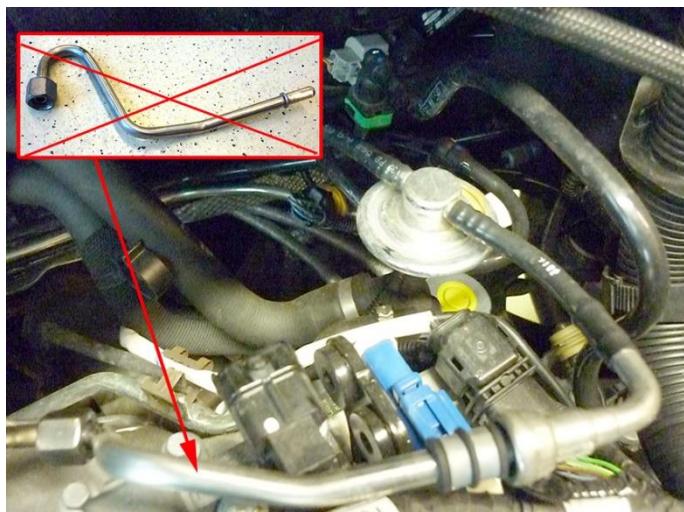

**High pressure petrol pipe installation nut:** 26.5 ~ 32.4 Nm.

Installation is reverse of removal.

## High pressure petrol pump installation

Remove air-filter, ignition coils, cover, wiper box, left wiper motor ( driver side )  
Replace the high pressure pump for the adapted high pressure pump.  
( Follow the workshop manual of the car )

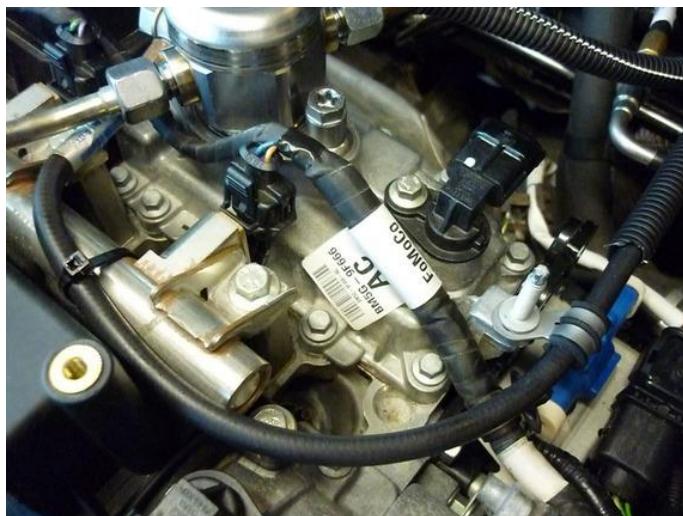

Remove low pressure petrol line ( not used )

Install a new ( shorter ) bolt.

## High pressure pump return

Replace original M6 bolt for normal M6x25

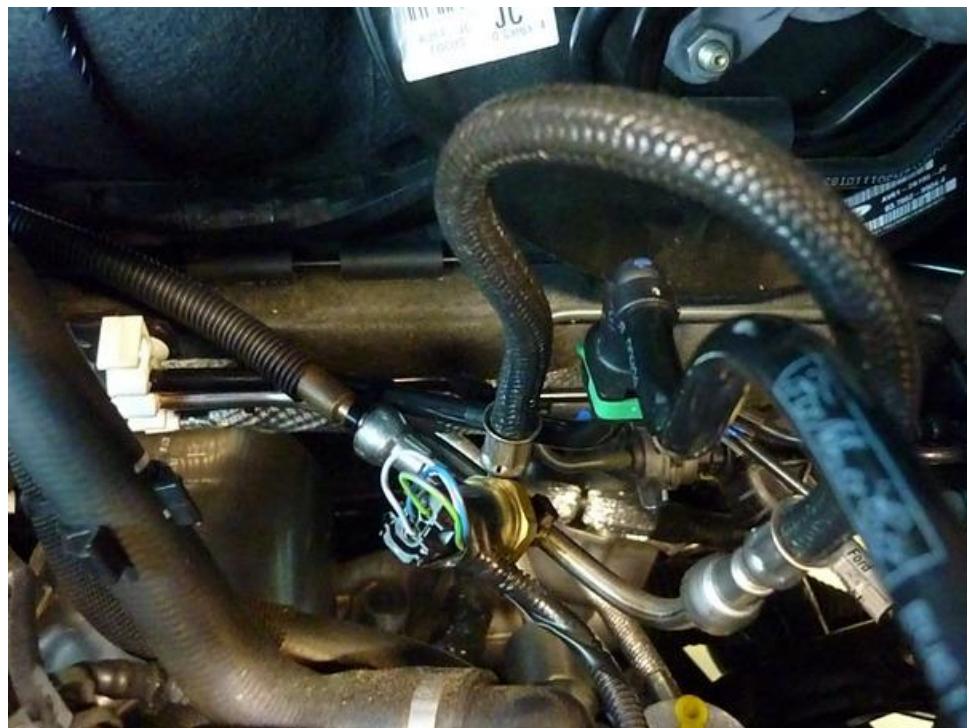

## High pressure pump

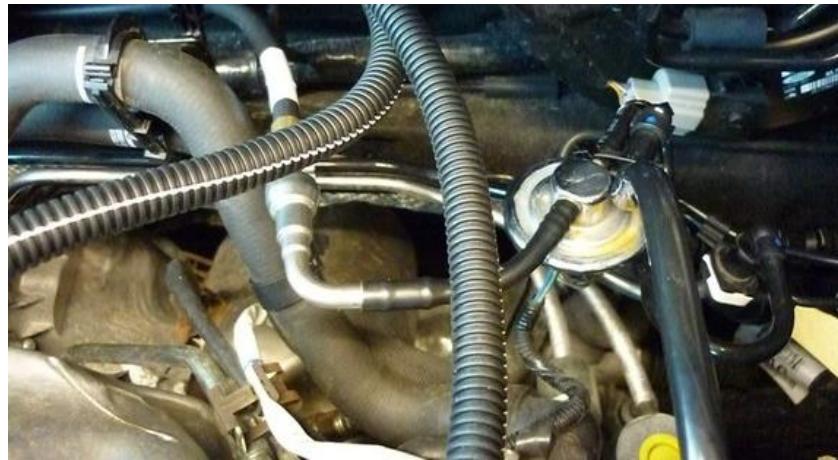

Remove bolt ( cut away )

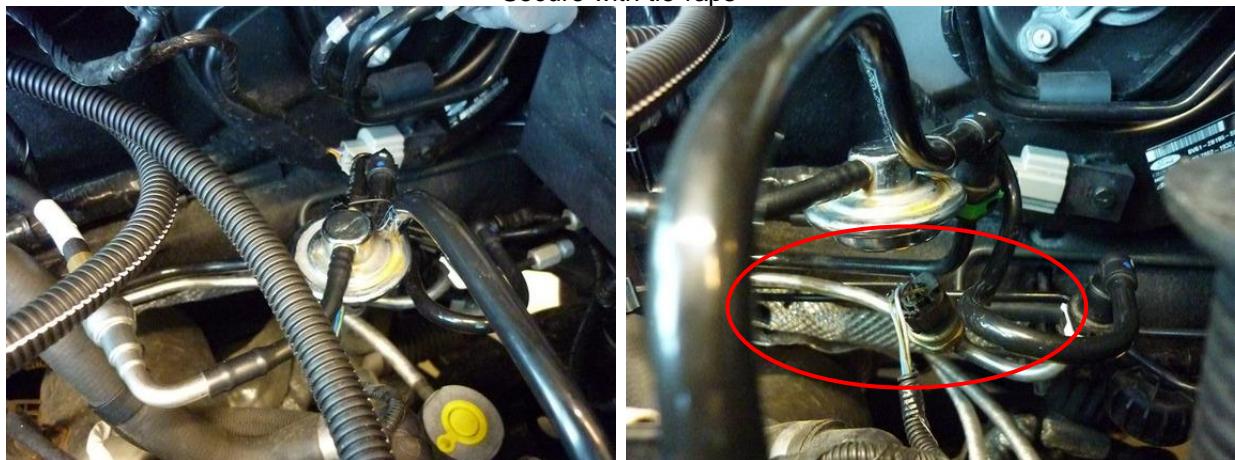

**Connection of the fuel hose to the boost pump. Tourneo**

**Connection of the fuel hose to the boost pump, without hose damper. Focus / C-Max**

Original hose connected to the boost pump inlet ( petrol supply line with Low Pressure petrol sensor )

**Connection of the fuel hose to the boost pump, hose with damper. Focus**

Secure with tie-raps

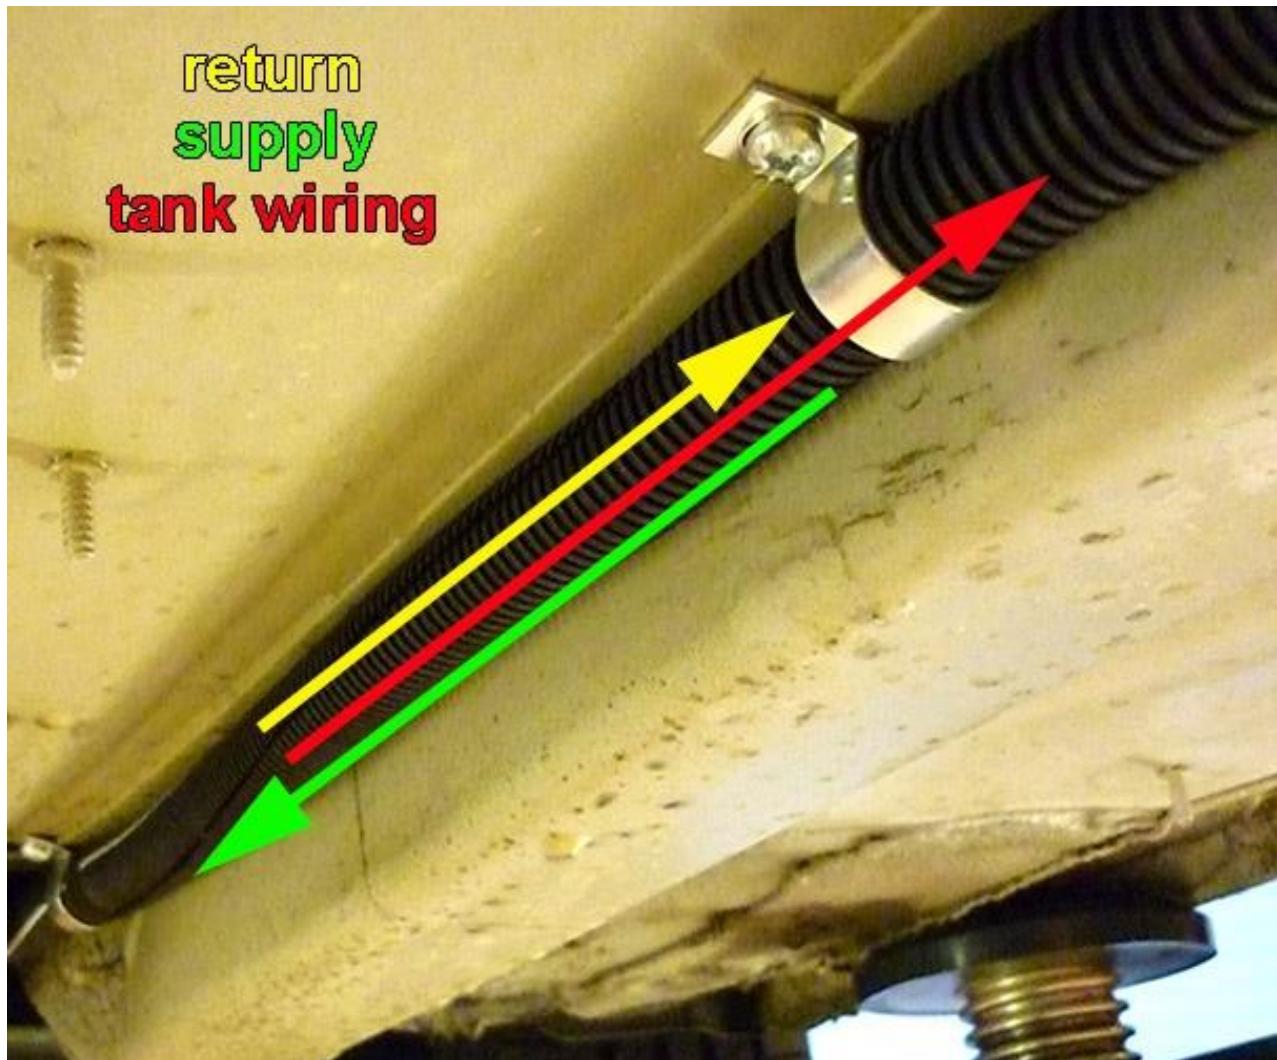

Original hose connected to the boost pump inlet ( petrol supply line with Low Pressure petrol sensor )

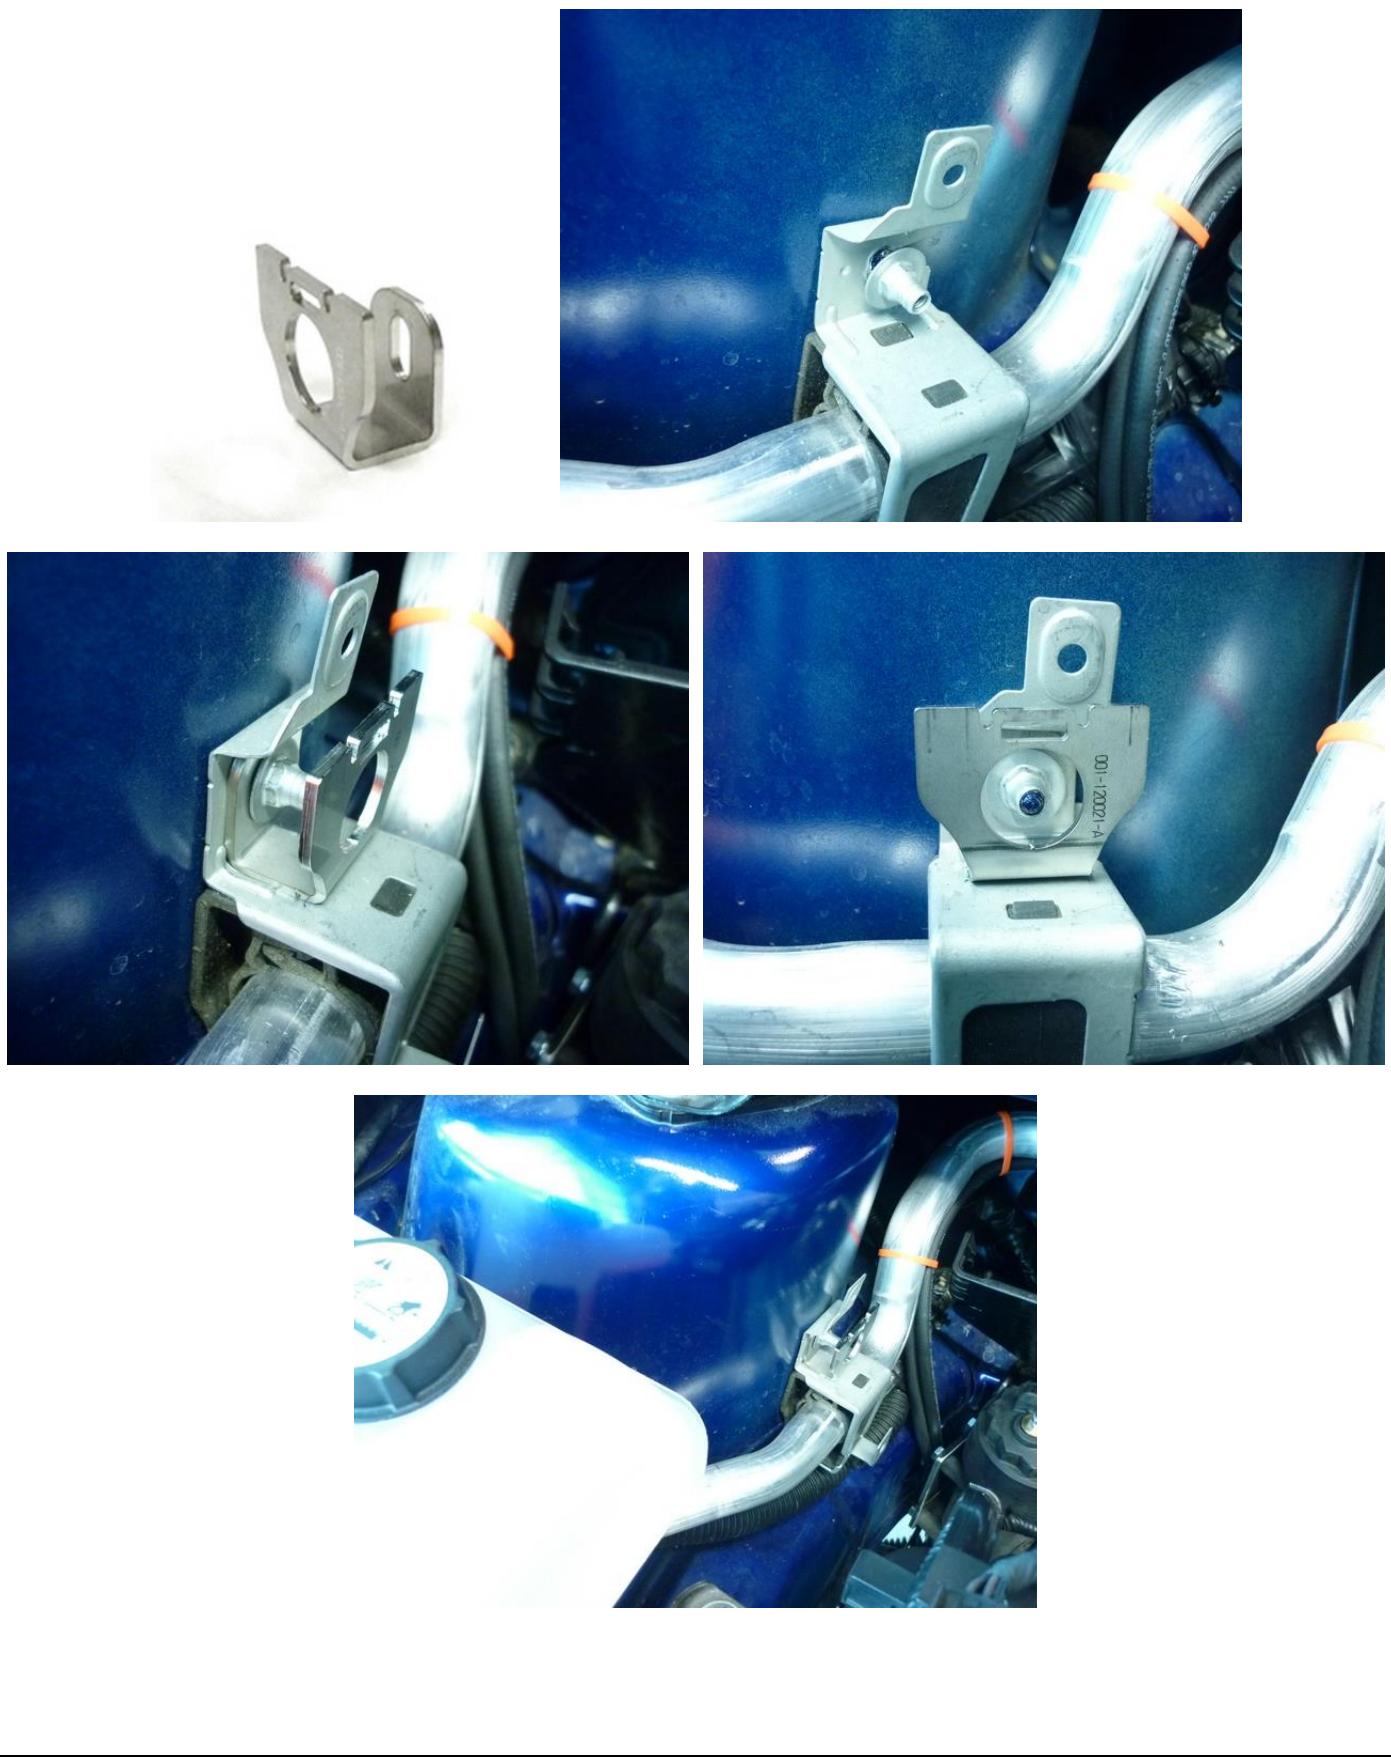

### Supply hose – Return hose – Tank wiring

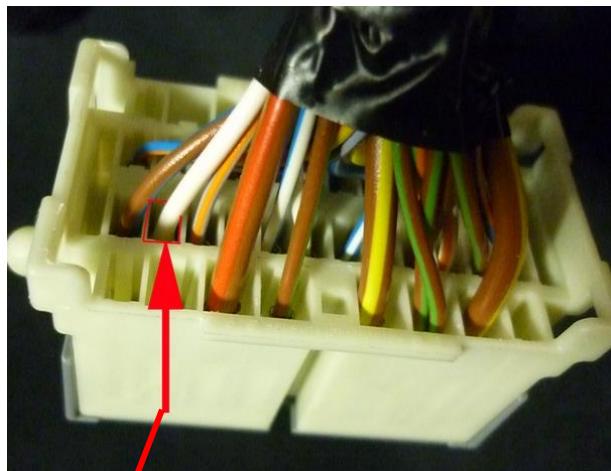

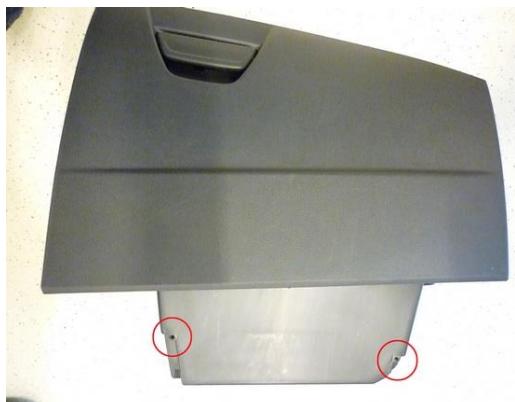

Protect the supply- and return hose together with tank-wiring using the Ø16mm split tube.  
Mount the "hose assembly" with clamps, with a maximum distance of 40cm.

**Tank fuel lines and wiring**

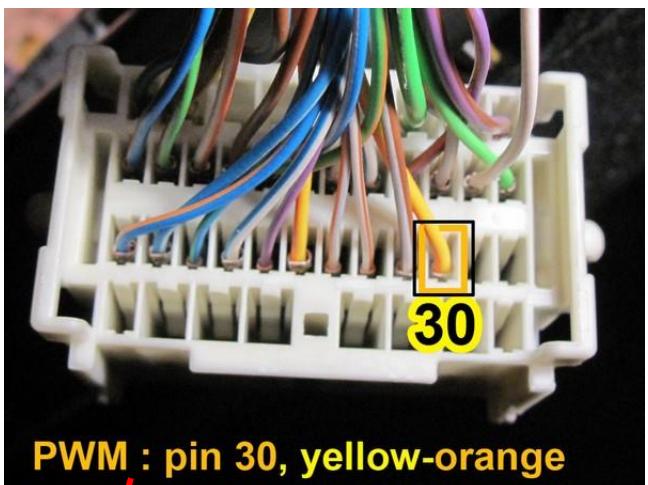

**Tank fuel lines and wiring**

**Mounting the fuse / relay box bracket (only Focus & Kuga)**

**PWM signal Focus**

White wire = PWM 56

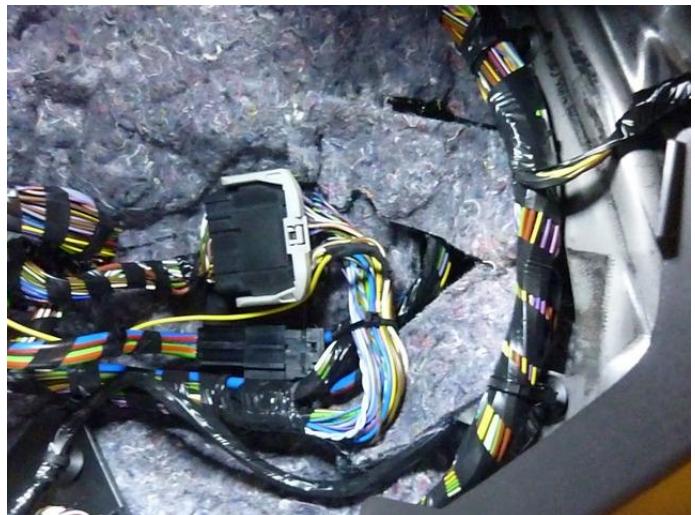

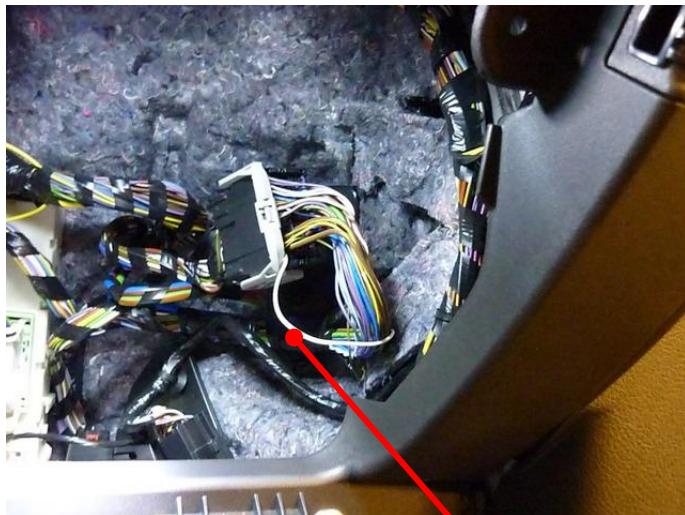

**PWM signal Kuga**

**PWM : pin 30, yellow-orange**

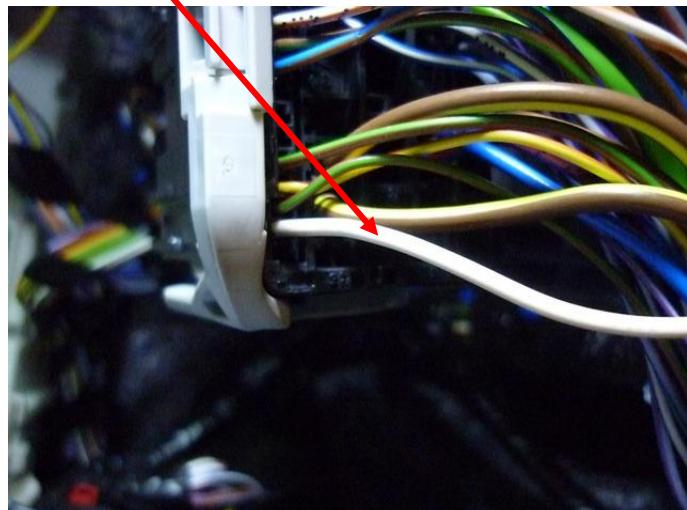

## PWM Signal Tourneo Connect

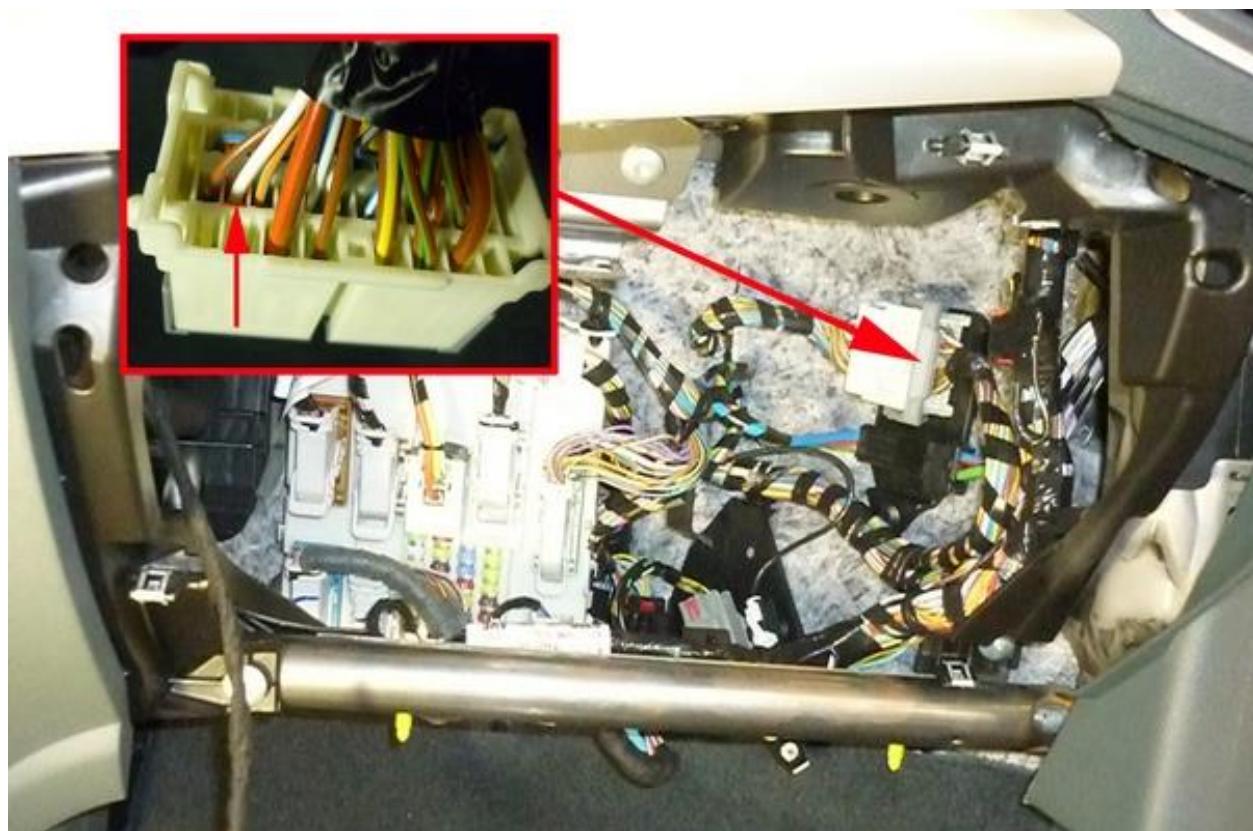

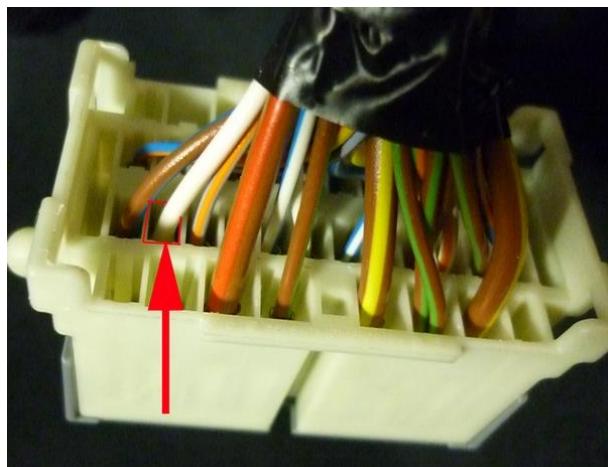

Remove glove compartment.

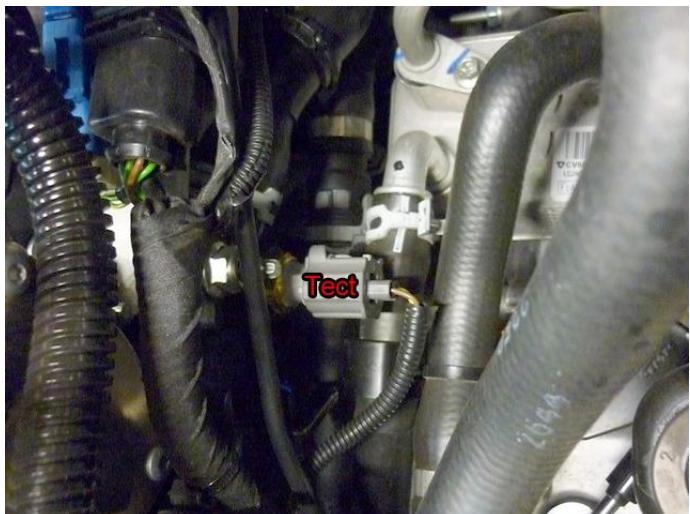

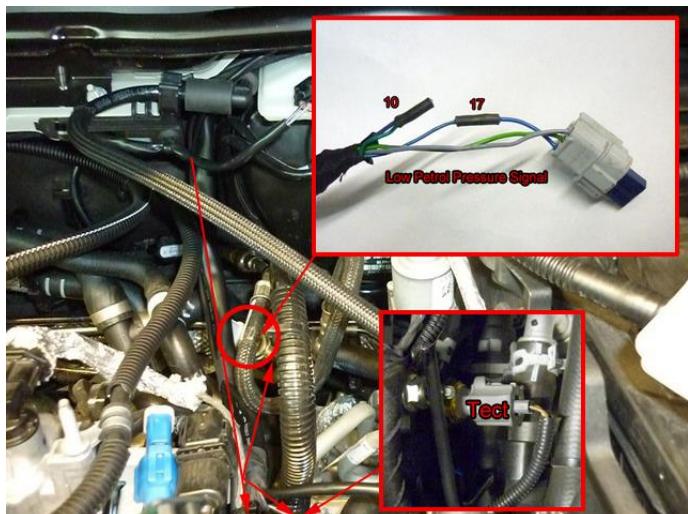

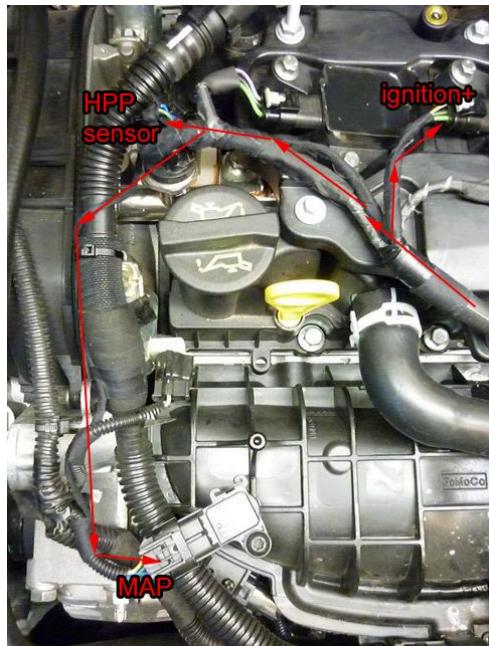

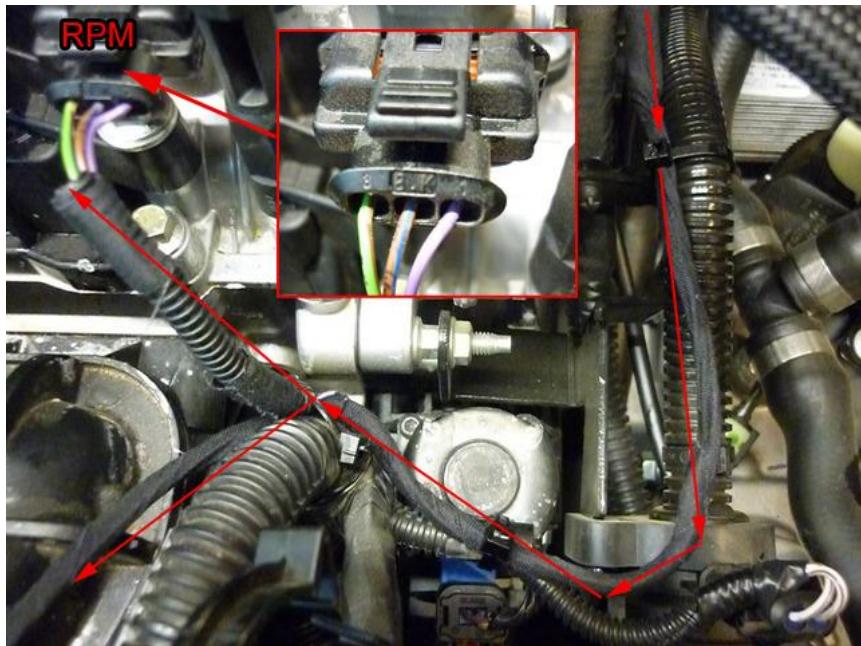

Extend the yellow-green wire to connect to the WHITE wire:

56 DI 2	Yellow-green	Digital Input 2, OEM petrol pump driver, PWM IN Wire colour : white Wire location : behind glove compartment
---------	--------------	--

**PWM signal C-Max**

## Wiring

## Mounting the fuel selection switch - Focus

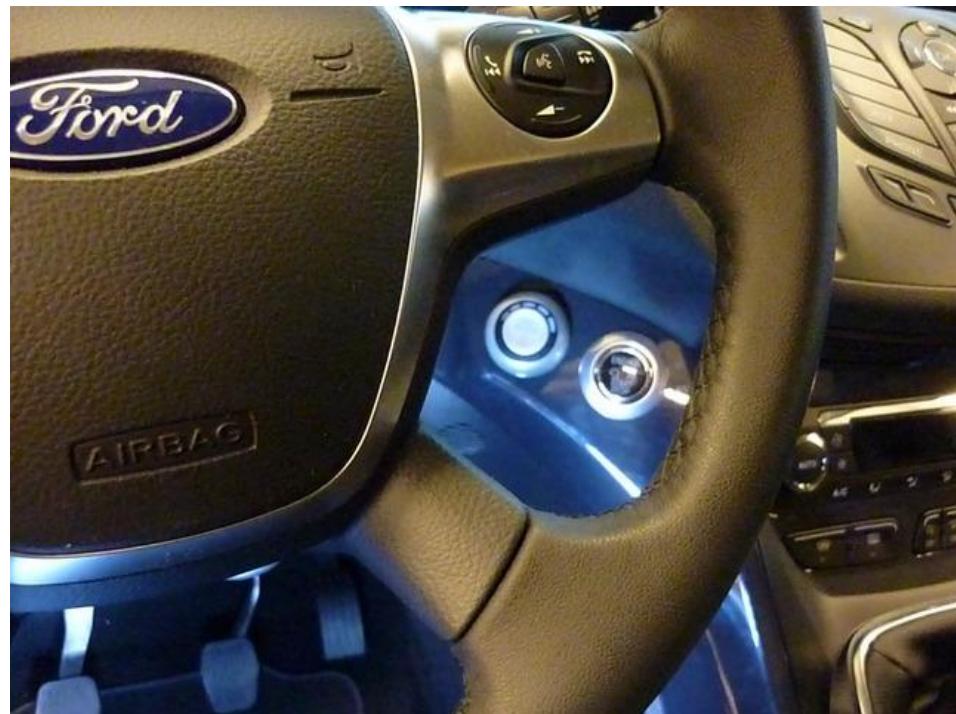

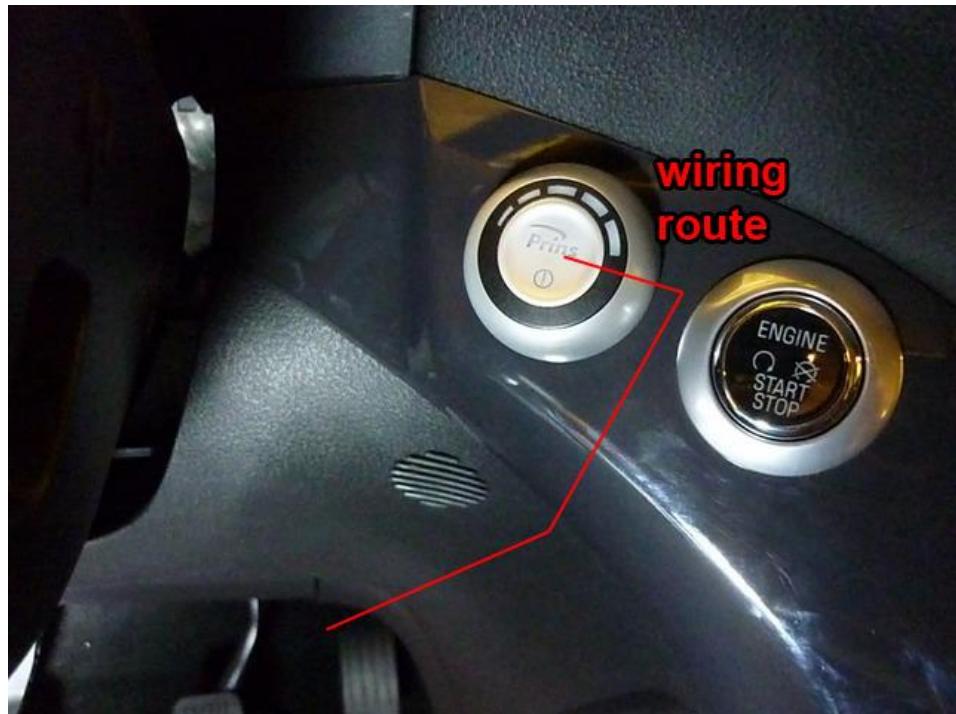

Mount the switch, drill hole Ø8,3mm.

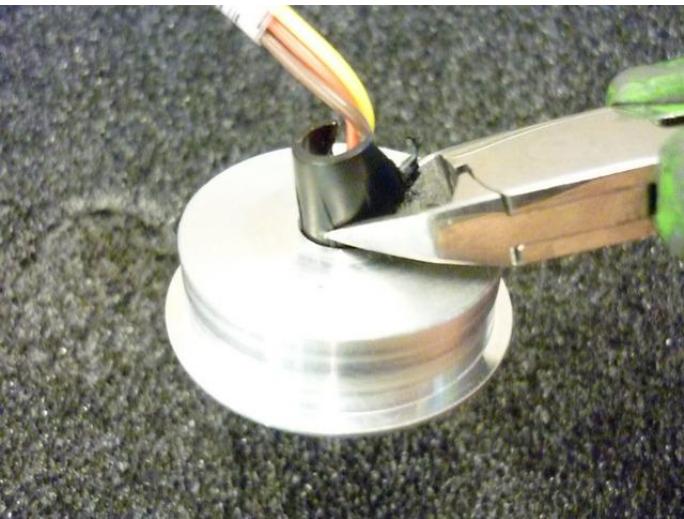

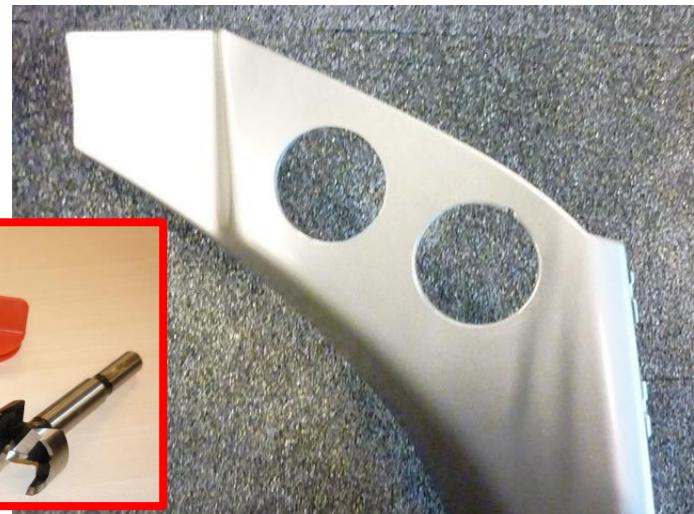

## Mounting the fuel selection switch - Kuga option 1 (ring)

Mount the switch, drill hole Ø8,3mm.

**Mounting the fuel selection switch – Kuga option 2 (recessed)**

**Mounting the fuel selection switch – Kuga option 2 (recessed)**

**Mounting the fuel selection switch – Kuga option 2 (recessed)**

**Mounting the fuel selection switch – Kuga option 2 (recessed)**

## Mounting the fuel selection switch C-Max

Mount the switch, drill Ø8,2mm.

Drill Ø8.2mm

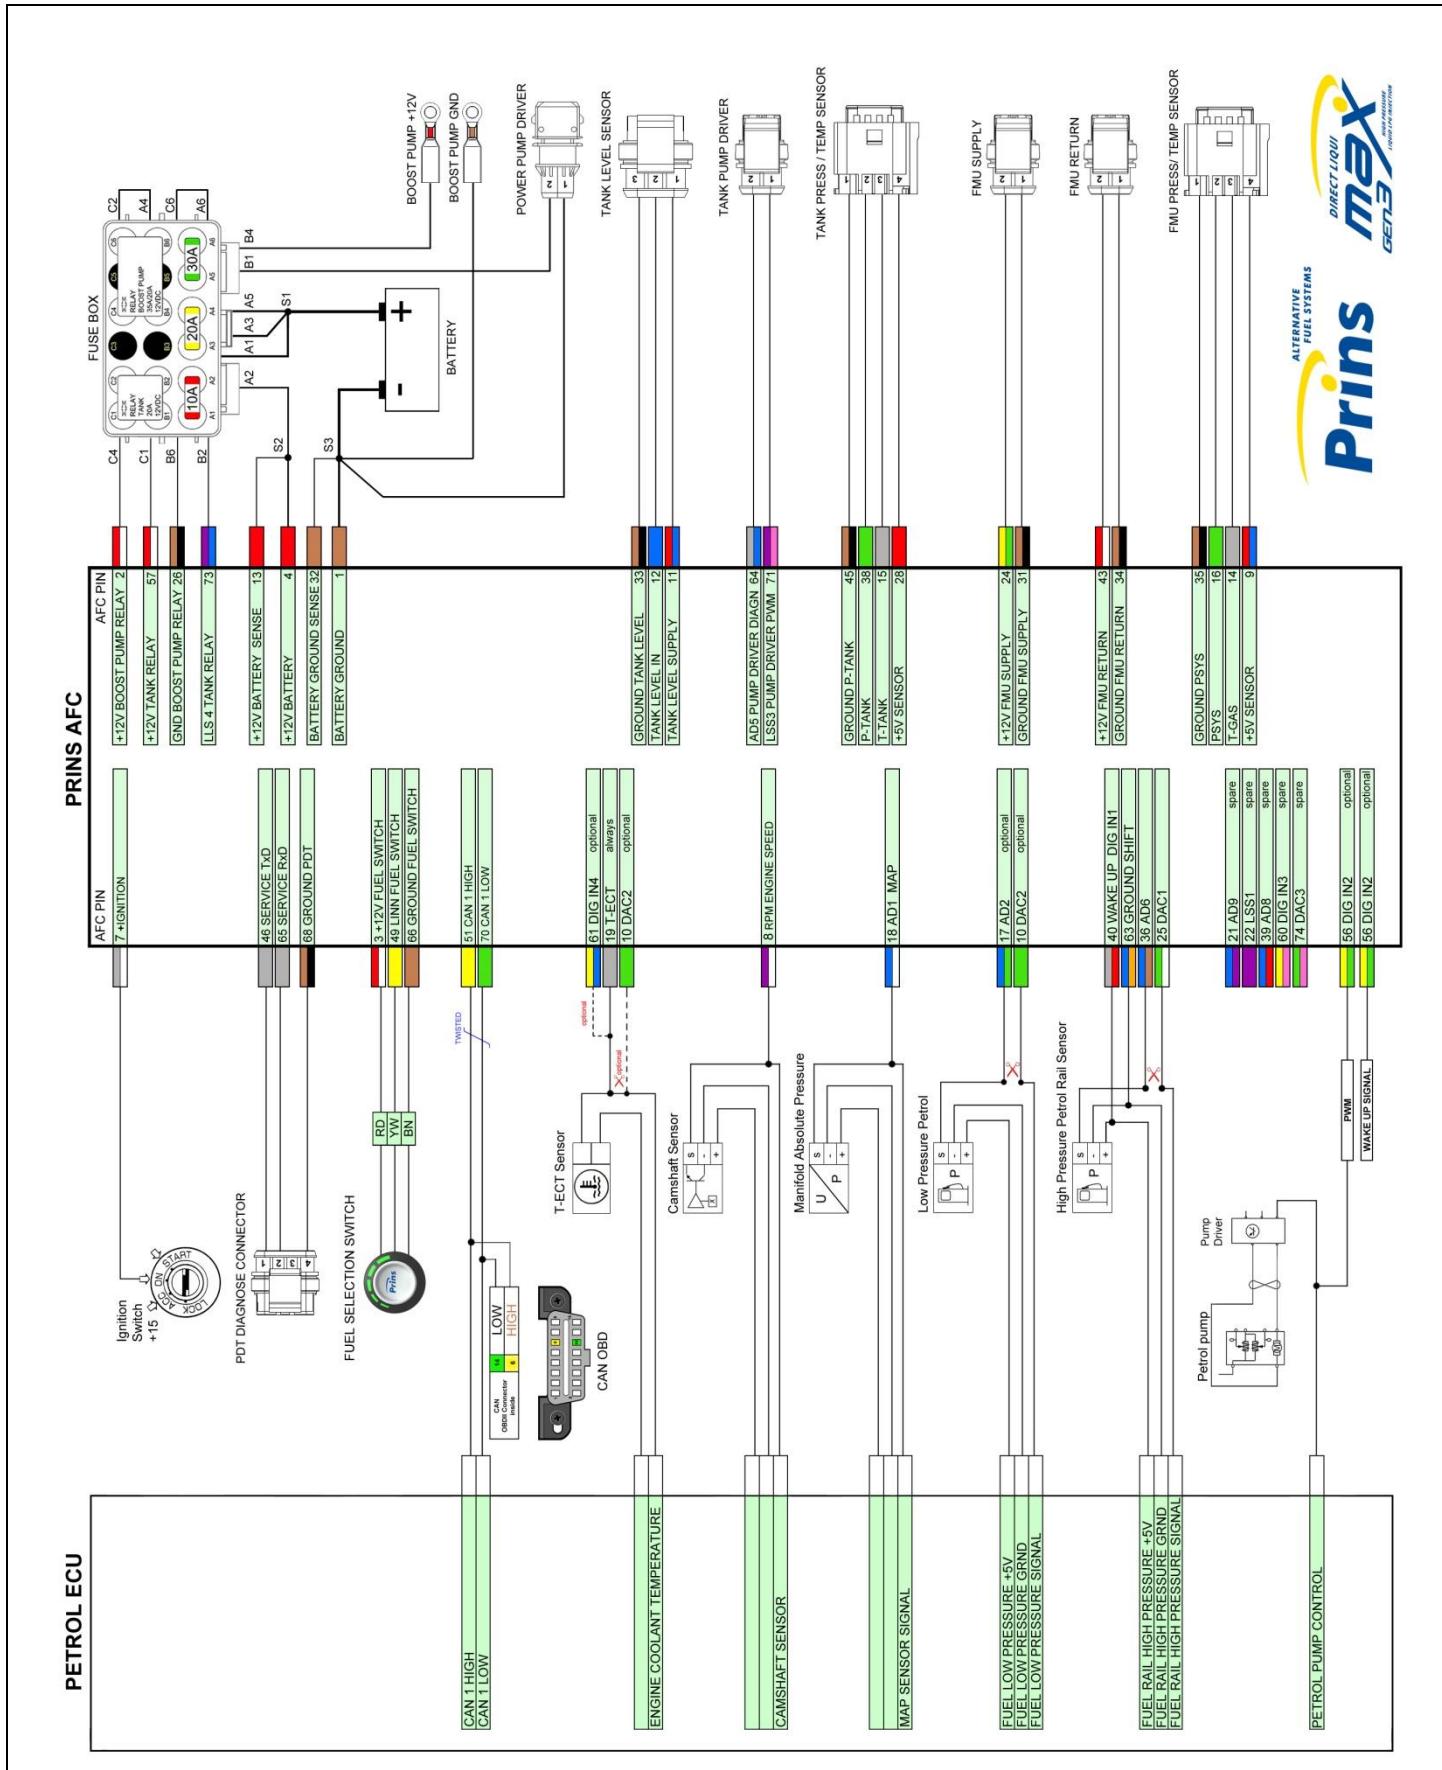

## Mounting the fuel selection switch Tourneo Connect

Mount the switch, drill Ø8,2mm.

## Prins safety stickers

Apply the sticker on an eye catching location.

## Checklist after installation

1. Install the system fuses.  
Turn on ignition.  
Connect the Prins Diagnostic Tool and run the Prins Diagnostic program.  
When working on the car, beware of moving and rotating parts in the engine compartment (even when the engine is not running !!).
2. When commissioning the LPG system, you must activate the AFC with the diagnosis software.
3. Check whether the program in the AFC matches with the car (dedicated engine set):  
See "Identification" in the diagnosis program.
4. Check all components and connections for any LPG leakage, use a gas leak detector device or a fluid detection like soap. Also check for petrol leakage.  
Check all made connections and XD-hose crimps for petrol / LPG leakage.  
Make sure the solenoid valves are in open position.  
No evidence of leakage is permitted.  
Caution for moving and rotating parts in the engine compartment !
5. Use the diagnosis software to check again all input and output signals.
6. Check the system for error codes and solve these if required.  
Check the petrol ECU for EOBD error codes.  
Place the protection connector back on the diagnose connector.
7. Make a test drive and check the cars drivability on LPG and petrol.
