

## ***Installation manual***

### ***PART 2/2***

MANUFACTURER	BMW (based on F30 320i ED)
ENGINE DISPLACEMENT	1598cc
NUMBER OF VALVES	16v
ENGINE CODE / NUMBER - OUTPUT	N13B16A – 75 / 100 / 125 / 130kW
FIRING ORDER	1-3-4-2
VEHICLE CATEGORIES	M
TRANSMISSION	AT
VERSION	AFC-2.1 DI-LPG
TYPE VSI INJECTOR	KN9 - 63cc
TYPE INJECTION MODULE	Type 1
PETROL ECU MANUFACTURER / CODE	Bosch 0.261.S11.037 (810)
MODEL YEAR:	2011 - 2015
SYSTEM APPROVAL NUMBER ( R115 )	(Only 130kW) E4-115R-000045 / VSI-LPG 51
LOCATION R115 SYSTEM STICKER	right side, centre door post
ENGINE SET NUMBER	343/121001/A
MANUAL NUMBER	076/0302000
DATE	2018-03-15

<b>FOR EXPLANATION AND CIRCUIT DIAGRAMS SEE : INSTALLATION MANUAL GENERAL PART 1 / 2</b>	

## General instructions

- The installation of the system shall be done in accordance with the installation manual provided by Prins Autogassystemen.
- This manual is based on Dutch regulations; always install the system in accordance to the local regulations.
- Always download the “general manual 1/2” from our [website](#) for basic instructions and diagrams.
- Always disconnect the battery when installing the LPG system. Make sure the ignition key is outside the car. Be aware of central door locking, radio / telephone memory code and alarm system.
- Do not place the main fuse into the fuse holder before having completed the installation of the VSI system.
- The VSI computer has to be activated by means of the diagnosis software.
- In the unlikely event the AFC fails, it will automatically switch over to petrol. Never disconnect the AFC connector, unless you have removed the main fuse.
- When installing the VSI wiring harness, ensure that it does not run near any of the ignition components.
- Solder and insulate all electrical connections.  
The wires in the loom are provided with numbers and text.  
The text on the wire explains the function of the wire.  
The wire harness is not model specific, therefore it may be necessary to adjust the length of the wires.  
Ensure maximum care is taken when connecting the wiring.  
Make professional joints using solder and shrink sleeve. Do not stretch the wiring harness.
- No component of the LPG-system shall be located within 100mm of the exhaust or similar heat source, unless such components are adequately shielded against heat.
- Remove any internal burrs after having shortened the LPG pipe.  
(This guarantees the maximum flow through the pipe without pollution.)
- If holes have to be drilled (wear safety glasses) for installing brackets, etc., the drilled holes must always be treated with an anti-corrosion agent after the chips have been removed (especially when mounting an exterior filler into the body work).
- After having completed the installation, check the whole system for gas leakage; use a gas leak detection device. Also check for any leak of engine coolant, petrol and air.
- Fitting and maintenance is only allowed by Prins Autogassystemen selected LPG engineers.
- Failure to follow the instructions in this manual can result in a poor or non-working LPG-installation or a dangerous situation.
- For maintenance instructions and filter registration see owner's manual.
- Prins Autogassystemen is not responsible for any damages to people or objects as a result of changes to Prins products.
- [Check our website regularly for diagrams, certificates, updates, info-bulletins and product information.](#)

Please fill in the [warranty portal](#) completely within 14 days after installation.

## **Required equipment / tools / materials for installing a complete system**

- Complete workshop toolbox (wrenches, screwdrivers, cutters, pliers, ratchet, sockets)
- Car lift
- Portable computer
- Vehicle fuel system scan tool or OBD scan tool Prins (part no. 099/99928)
- Exhaust gas analyser
- Multimeter
- Oscilloscope
- Prins diagnostic software
- Prins Diagnostic Tool
- Torque wrench (5-50Nm)
- Torque wrench (200-250Nm)
- Portable light
- Assortment drill bits Ø4 to 12 mm
- Assortment cutters (Ø20, 30, 50, 70 mm)
- Portable drill or pneumatic drill
- Thread cutting device (male M6x1, M8x1, M10x1)
- Air gun
- Vacuum cleaner
- Safety goggles
- Hot air gun
- Soldering iron, soldering tin
- Wire-stripping pliers
- Adhesive tape
- Adhesive sealant
- Thread locking compound
- Anti-corrosion agent / black body coating
- Gas leak detection device or foam leak spray
- Shrink sleeves

## **Vehicle check**

- Check the vehicle drivability on petrol
- Check the fuel system for error codes (scan tool)
- Check if the catalytic converter is in good condition (exhaust gas analyser)
- Check the condition of the ignition system (spark plugs, cables, coil)

### Tightening moments

	Nm	Spanner mm
M5 x 0,8	6.5	8
M6 x 1,0	11.3	10
M8 x 1,25	27.3	13
M10 x 1	52	15-16-17
M10 x 1,5	54	15-16-17

LPG manifold nipple	1	3.5 Allen
Reducer nut - bracket	10	13
Lock-off nut	15	16
Fuel line nut – lock-off	20	13
Fuel line tank – lock-off	20	16
Filling hose connections	50	22

#### EXPLANATION OF SYMBOLS:

= IMPORTANT, CAUTION

= WEAR SAFETY GOGGLES

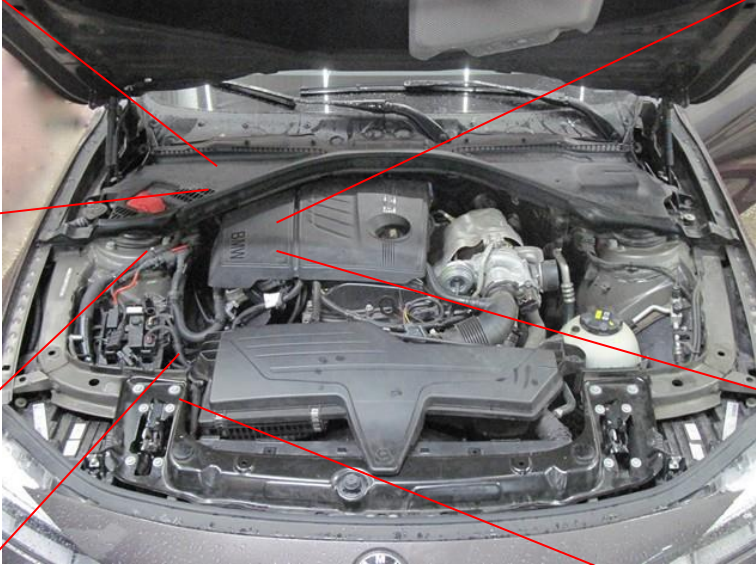

Basic System Overview

## VSI approval numbers

	
<p>Reducer VSI LPG Prins : E4-67R-010054  Lock-off valve OMB : E8-67R-014327  Lock-off valve Valtek : E4-67R-010041</p>	<p>Injector rail Prins : LPG E4-67R-010093  CNG E4-110R-000021</p>
	
<p>Filter unit T1 / T2 Prins : LPG E4-67R-010096  CNG E4-110R-000028</p>	<p>Injector Keihin KN9 : LPG E4-67R-010310  CNG E4-110R-000295</p>
	
<p>Prins AFC : E4-67R-010098  E4-10R-030507</p>	<p>Tubithor : LPG E13-67R-010145  CNG E13-110R-000017  Rubia : LPG E4-67R-010068  CNG E4-110R-000003  WinLas : LPG E37-67R-010140  CNG E37-110R-000012  Thunderflex : LPG E24-67R-010018  CNG E24-110R-000040</p>

VSI component location overview

<p><b>AFC</b></p> 		<p><b>Petrol ECU</b></p> 
<p><b>Injection module</b></p> 		
<p><b>Fuse box</b></p> 		<p><b>Rail(s)</b></p> 
<p><b>Filter</b></p> 		<p><b>Reducer</b></p>

---	---

Example mounting (based on F30 320i ED)

Reducer & filter

AFC & injection module

T-pieces

## Overpressure / MAP connection

Remove manifold, drill hole Ø5mm and cut thread M6x1. Mount the coupling with a locking compound.

## Mounting the inlet manifold couplings

Remove the inlet manifold. Drill 4x holes of **8,5mm** in the inlet manifold.  
Cut **M10x1** thread in these holes. Place the VSI couplings with a lock compound in the inlet manifold.  
Watch out that the lock compound doesn't come inside the VSI couplings.  
Place the inlet manifold back on the engine.

**Ø8,5mm / M10x1**

2 options for the injector hoses. Nylon (black) or PTFE (white). Use the supplied hose & couplings.

If the nylon hose is used, be sure the hose is long enough to reach the VSI-injector.

Inside the manifold, cut-off the hoses with a length of 75mm. Mount the manifold back to the engine.

## Mounting the VSI injector rail

Cut thread M6 in the lower petrol ECU fixation from the plastic petrol ECM engine mount.  
Mount a M6 colonette (+/-15mm, not supplied) in the just adjusted fixations.

Remove the indicated part of the plastic. Mount the rail with bracket to the colonette, with a 2<sup>nd</sup> colonette.

Mount the injector rail with the bracket to the plastic petrol ECM engine mount.

## Mounting the VSI injector rail

With PTFE, mount the 5mm LPG hose from injector to the manifold coupling.

With nylons, mount the nylons hose with the 6mm LPG hose to the injector.  
Use the same hose routing for PTFE & nylons.

Mount the petrol ECM. On top the original screws, below M6 bolts or screws.

## Electrical connections

Check and measure the wiring in case of changes in the cars wiring colours.

### Connector Injection Module

## Electrical connections – Insulate

10	DAC 2		Green	<i>Insulate</i>
19	AD4		Blue	<i>Insulate</i>
20	AD3		Blue-pink	<i>Insulate</i>
22	LSS1		Purple	<i>Insulate</i>
23	LSS2		Purple-green	<i>Insulate</i>
36	AD 6		Blue-brown	<i>Insulate</i>
38	AD7		Blue-light Blue	<i>Insulate</i>
39	AD8		Blue-red	<i>Insulate</i>
43	+12 Valve 2		Red-white	<i>Insulate</i>
50	DAC4		Green-blue	<i>Insulate</i>
56	DI2		Yellow-green	<i>Insulate</i>
60	DIG IN3		Yellow-pink	<i>Insulate</i>
61	DIG IN4		Yellow-blue	<i>Insulate</i>
62	C Ground		Brown-black	<i>Insulate</i>
74	DAC3		Green-pink	<i>Insulate</i>
<i>Insulate all extra not used wires.</i>				

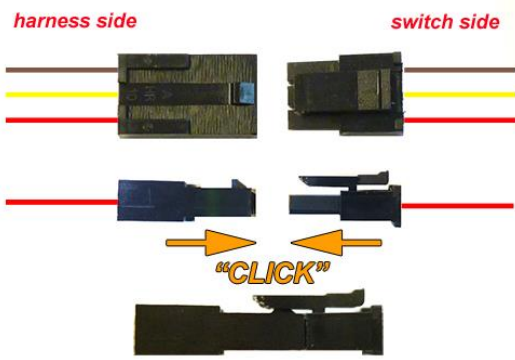

Electrical connections

Driver room

3-pole micro connector			Connect to the Prins fuel selection switch
66	Ground fuel switch	 Brown-black	
3	+12V fuel switch	 Red-white	
49	LIN fuel switch	 Yellow	

*harness side* *switch side*

Petrol ECM connector overview

Electrical connections

Check and measure the wiring in case of changes in the cars wiring colours.

32	Ground sense1 Ground battery		Brown	Connect to the '-' of the battery; use a ring terminal or solder: Wire colour: <b>Black</b> Wire location: <b>On ground point , right front in engine room.</b>
----	---------------------------------	---	-------	---

4	+12V Battery		Red	Connect to the '+' of the battery; use a ring terminal or solder: Wire colour: <b>Red</b> Wire location: <b>On +Batt point at right suspension strut.</b>
---	--------------	--	-----	---

Do not place the fuse in the holder before having completed the installation of the LPG system.

### Electrical connections

Check and measure the wiring in case of changes in the cars wiring colours.

98	98 G INJ OUT 1		<b>White-yellow</b>	Connector VSI-injector to cylinder 1. Timing belt/chain side
106	106 G + INJ 1		<b>red</b>	
99	99 G INJ OUT 2		<b>Green-yellow</b>	Connector VSI-injector to cylinder 2.
107	107 G + INJ 2		<b>red</b>	
100	100 G INJ OUT 3		<b>Pink-yellow</b>	Connector VSI-injector to cylinder 3.
108	108 G + INJ 3		<b>red</b>	
82	82 G INJ OUT 4		<b>Blue-yellow</b>	Connector VSI-injector to cylinder 4.
90	90 G + INJ 4		<b>red</b>	

## Electrical connections

**Check and measure the wiring in case of changes in the cars wiring colours.**

For measuring the petrol injectors :

Interrupt each petrol injector control wire (injector min)

Each VSI wire has a petrol injector / cylinder number printed on the wire, connect this wire to the corresponding petrol injector / cylinder.

Connect the **bicoloured** VSI measuring wire to the **ecu side** (wire code: ecu-lo).

Connect the **corresponding full coloured** VSI wire to the **petrol injector side** (wire code: inj-lo).

See diagrams: Installation manual general part 1 / 2.

### Attention:

**Each bicoloured measuring wire corresponds to a specific LPG injector and petrol injector / cylinder number. Do not interchange the wires.**

<b>Petrol injector cyl. 1</b>

112	+ Ignition		Red-grey

## Electrical connections

### Connectors in wiring loom

<b>2-pole blue connector</b> 15 T-ECT 34 Ground T-ECT	Grey Brown-black	<i>For measuring the engine coolant temperature (Tect ).</i>  Connect the connector to the reducer temperature sensor.
<b>4-pole connector</b> 35 Ground Psys 14 T-Gas 9 +5 Volt sensor 16 Psys	Brown-black Grey Red-blue Green	<i>For measuring gas pressure and temperature.</i>  Connect the connector to the filter unit sensor.
<b>2-pole connector</b> 24 +12V reducer lock-off 31 C Ground	Yellow-green Brown-black	Connect the connector to the reducer lock-off valve.
<b>4-pole connector</b> 46 Service TxD 65 Service RxD 68 Ground PDT	Grey Grey Brown-black	Diagnose connector.
<b>Tank wiring loom</b> 2 +12V Tank relay 12 Tank level IN 26 Ground tank relay	red blue black	Connect to the tank lock-off. Connect the tank level gauge. Connect to the tank lock-off.
<b>Wiring loom link</b> 45 C ground 58 +12V switched 64 AD5	Brown-black Red-white Blue-grey	Connection from AFC connector A to connector B.  

### Optional:

<b>3-pole connector</b> 11 + manometer 12 tank level in 33 ground manometer	red blue brown	<b>Cut off connector and insulate wires</b>
--	----------------------	---

## Checklist after installation

1. Connect the Prins Diagnostic Tool and run the VSI diagnostic program.  
Install the VSI fuse, turn the ignition key in the accessory position.  
When working on the car, beware of moving and rotating parts in the engine compartment.
2. When commissioning the LPG system, you must activate the AFC with the diagnostic software.  
When the AFC has not been activated, the switch will keep blinking.  
To activate the AFC, select function \*activate ECM\* in the diagnostic software.
3. Check whether the program in the AFC matches with the car (dedicated engine set):  
Refer the car description in the diagnostic software (Basic → Identification) and compare these with the set number.
4. The system will switch over to LPG as soon as the temperature of the coolant becomes higher than parameter 70 - Switch over ECT.
5. Check all components and connections for any gas leakage (use a LPG leak detector device or a fluid detection like soap). Caution for moving and rotating parts in the engine compartment!
6. Let the engine run warm on petrol >80°C.  
Check if the reducer heats up.  
Check the engine signals, petrol injection time, RPM, ECT, lambda, MAP signal and petrol pressure signal.  
Let the engine run idle on LPG.  
Adjust the reducer pressure.  
Refer to \*Basic → System\* in the diagnostic software for the idle level value set.  
Adjust the reducer pressure in such a way that the pressure measured (P-sys) equals the idle level value.  
Turn the socket-head screw at the front of the reducer to adjust the pressure.  
An error code will be generated whenever the pressure variation is too high.
7. Use the diagnostic software to check again all input and output signals.
8. Check the system for error codes and solve these, if required.  
Check the petrol ECM for EOBD error codes.  
Place the protection connector on the VSI communication connector.
9. Take a test drive and check the drivability on LPG and petrol.
