FOR EXPLANATION AND CIRCUIT DIAGRAMS SEE: INSTALLATION MANUAL GENERAL PAI	RT 1 / 2

General instructions

- The installation of the system shall be done in accordance with the installation manual provided by Prins Autogassystemen.
- This manual is based on Dutch regulations, always install the system in accordance to the local regulations.
- Always download the "general manual 1/2" from our website for basic instructions and diagrams.
- Always disconnect the battery when installing the LPG system. Make sure the ignition key is outside the car. Be aware of central door locking, radio / telephone memory code, alarm system.
- Do not place the main fuse into the fuse holder before having completed the installation of the VSI system.
- The VSI computer has to be activated by means of the diagnosis software.
- In the unlikely event the VSI computer fails, it will automatically switch over to petrol.
 Never disconnect the VSI computer connector, unless you have removed the main fuse.
- When installing the VSI wiring harness, ensure that it does not run near any of the ignition components.

Solder and insulate all electrical connections.

The wires in the loom are provided with numbers and text. The text on the wire explains the function of the wire. The wire harness is not model specific, therefore is it may be necessary to adjust the length of the wires. Ensure maximum care is taken when connecting wiring.

Make professional joints using solder and shrink sleeve. Do not stretch the wiring harness.

- No component of the LPG-system shall be located within 100 mm of the exhaust or similar heat source, unless such components are adequately shielded against heat.
- Remove any internal burrs, after having shortened the LPG pipe. (This guarantees the maximum flow through the pipe without pollution.)
- If holes have to be drilled (wear safety glasses) for installing brackets, etc., the drilled holes must always be treated with an anticorrosion agent, after the chips have been removed (especially when mounting a exterior filler into body work).
- After having completed the installation, check the whole system for gas leakage; use a gas leak detection device. Also check for leak
 of engine coolant, petrol and air.

ATTENTION: please check, after activation of the AFC and switching the system to LPG, if DTC's are stored in the Prins diagnostic software.

If DTC's are stored, please contact our After Sales department for a software update in relation to the CAN-BUS compatibility. aftersales@prinsautogas.com

- Fitting and maintenance is only allowed by Prins Autogassystemen selected LPG engineers.
- Failure to follow the instructions in this manual can result in a poor or non-working gas installation or a dangerous situation.
- For maintenance instructions and filter registration see owner manual.
- Prins Autogassystemen is not responsible for any damages to people or objects as a result of changes to Prins products.
- Check our website regularly for diagrams, certificates, updates, info-bulletins and product information.

Please fill in the warranty portal completely within 8 days after installation.

Required equipment / tools / materials for installing a complete system

- Complete workshop toolbox (wrenches, screwdrivers, cutters, pliers, ratchet, sockets)
- Car lift
- Portable computer
- Vehicle fuel system scan tool or OBD scan tool Prins (part nr. 099/99928)
- Exhaust gas analyser
- Multimeter
- Oscilloscope
- Prins diagnostic software
- Prins diagnostic tool
- Torque wrench (5-50Nm)
- Torque wrench (200-250Nm)
- Portable light
- Assortment drill bits 4 to 12 mm
- Assortment cutters (Ø20, 30, 50, 70 mm)
- Portable drill or pneumatic drill
- Thread cutting device (male M6x1, M8x1, M10x1)
- Air gun
- Vacuum cleaner
- Safety goggles
- Hot air gun
- Soldering iron, soldering tin
- Wire-stripping pliers
- Adhesive tape
- Adhesive sealant
- Thread locking compound
- Anti-corrosion agent / black body coating
- Gas leak detection device or foam leak spray
- Shrink sleeves

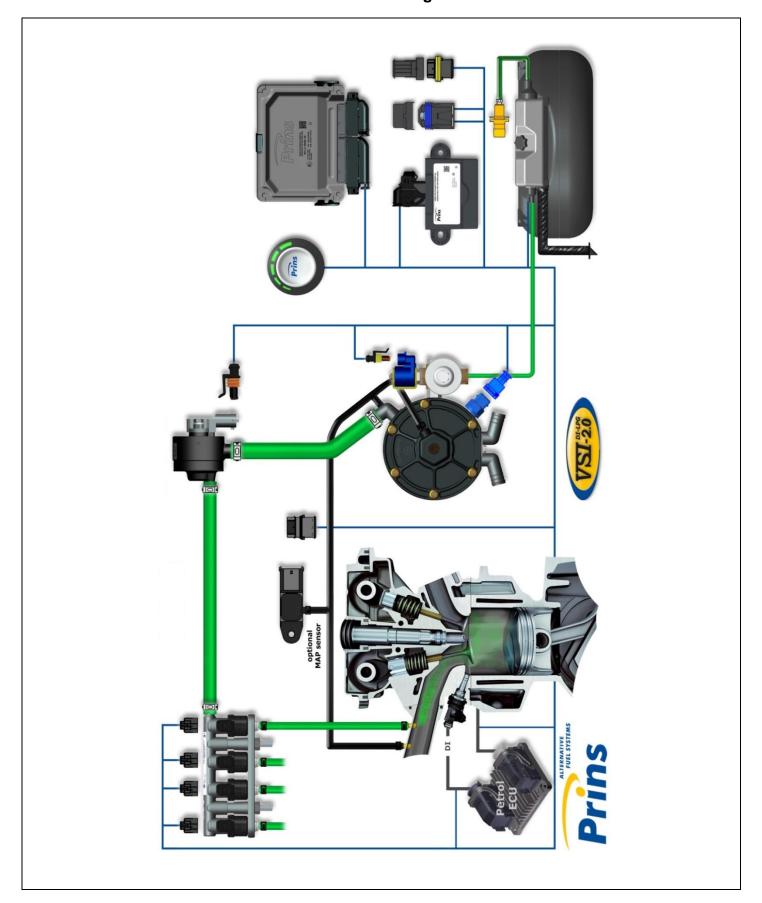

Vehicle check

- Check the vehicle drivability on petrol
- Check the fuel system for error codes (scan tool)
- Check if the catalytic converter is in good condition (exhaust gas analyser)
- Check the condition of the ignition system (spark plugs, cables, coil)

Overpressure / MAP connection

Mounting the inlet manifold couplings; MAP

Remove the inlet manifold.

Drill **5** holes of **5mm** in the inlet manifold. Cut **M6x1** thread in these holes. Place the VSI couplings with a lock compound in the inlet manifold. Watch out that the lock compound doesn't come inside the VSI couplings. Place the inlet manifold back on the engine.

Mounting the inlet manifold couplings

Mounting the VSI injector rail with hoses

(With cylinder deactivation).

Option 1 11mm hose routing Option 2

LPG hoses

Hose From component (Ømm)		To component	Hose length (cm)
5	VSI injector 1	Inlet manifold coupling cyl.1	20
5	VSI injector 2	Inlet manifold coupling cyl.2	18
5	VSI injector 3	Inlet manifold coupling cyl.3	18
5	VSI injector 4	Inlet manifold coupling cyl.4	20

General info.

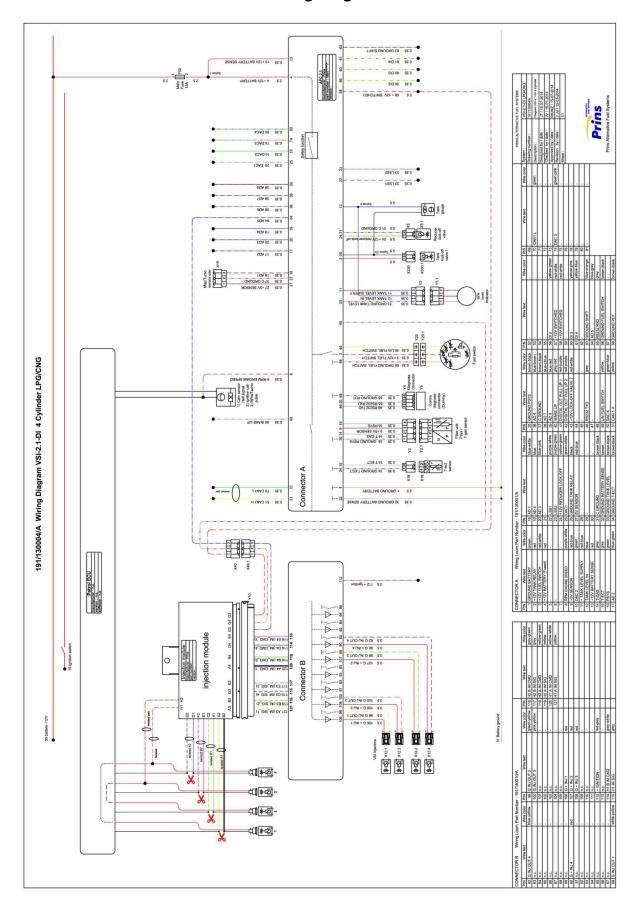

Cut the LPG hoses on length.

Please observe that there is no damage or fouling to the hoses.

Electrical connections

PIN-outs are LEADING

For measuring the petrol injectors:

Interrupt each petrol injector control wire (injector min)

Each VSI wire has a petrol injector / cylinder number printed on the wire, connect this wire to the corresponding petrol injector / cylinder.

Connect the **bicoloured** VSI measuring wire to the **ecu side**, (wire code: ecu-lo).

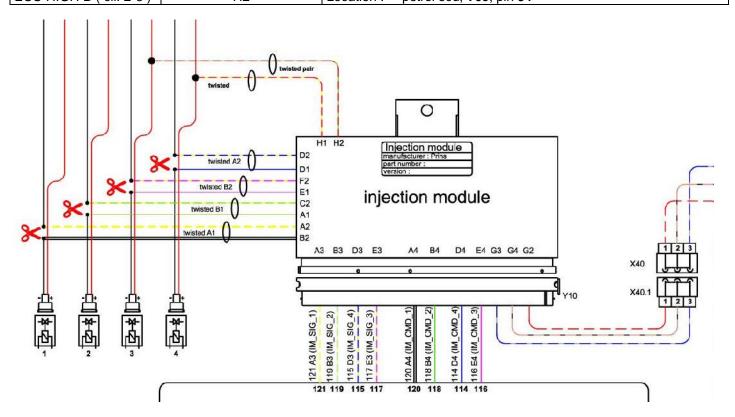

Connect the corresponding full coloured VSI wire to the petrol injector side (wire code: inj-lo).

See diagrams: Installation manual general part 1 / 2.

Attention:

Each bicoloured measuring wire corresponds to a specific LPG injector and petrol injector / cylinder number. Do not interchange the wires.

VSI measure wire nr. :	Full coloured / Bicoloured Module position	Interrupt pe	etrol injector wire
VSI wire inj/ecu-lo-1	white / white-yellow	Colour :	red-black
Petrol injector cyl. 1	B2 / A2	Location:	petrol ecu, T60 , pin 35
VSI wire inj/ecu-lo-2	green / green-yellow	Colour :	red-yellow
Petrol injector cyl. 2	A1 / C2	Location:	petrol ecu, T60 , pin 20
VSI wire inj/ecu-lo-3	pink / pink-yellow	Colour :	red-purple
Petrol injector cyl. 3	E1 / F2	Location:	petrol ecu, T60 , pin 50
VSI wire inj/ecu-lo-4	blue / blue-yellow	Colour :	red-blue
Petrol injector cyl. 4	D1 / D2	Location:	petrol ecu, T60 , pin 19
Module wire pos. H1	red-yellow	Colour :	brown-black
ECU HIGH A (cil. 1-4)	Ĥ1	Location:	petrol ecu, T60 , pin 33
Module wire pos. H2	red-green	Colour :	brown-purple
ECU HIGH B (cil. 2-3)	H2	Location:	petrol ecu. T60 , pin 34

45	C ground	Brown – black	Connection from AFC connector A to connector B
58	+12V switched	Red – white	
64	AD5	Blue - grey	

Optional:

3-pc	le connector		
11	+ manometer	red	Cut off connector and insulate wires
12	tank level in	blue	
33	ground manometer	brown	

Checklist after installation

- Connect the Prins Diagnostic Tool and run the VSI diagnostic program.
 Install the VSI fuse, turn the ignition key in the accessory position.
 When working on the car, beware of moving and rotating parts in the engine compartment.
- 2. When commissioning the LPG system, you must activate the VSI computer with the diagnostic software. When the VSI computer has not been activated, the switch will keep blinking. To activate the VSI computer, select function activate ECM in the diagnostic software.
- 3. Check whether the program in the VSI computer matches with the car (dedicated engine set) : Refer the car description in the diagnostic software (Basic → Identification) and compare these with the set number.
- 4. The system will switch over to LPG as soon as the temperature of the coolant becomes higher than parameter 70 Switch over ECT.
- 5. Check all components and connections for any gas leakage (use a LPG leak detector device or a fluid detection like soap). Caution for moving and rotating parts in the engine compartment!
- 6. Let the engine run warm on petrol >80°C.
 - Check if the evaporator heats up.
 - Check the engine signals, petrol injection time, RPM, ECT, lambda, MAP signal, petrol pressure signal. Let the engine run idle on LPG.
 - Adjust the evaporator pressure. Refer to Basic \rightarrow System in the diagnostic software for the idle level value set. Adjust the evaporator pressure in such a way that the pressure measured (P-sys) equals the idle level value. Turn the socket-head screw at the front of the evaporator to adjust the pressure. An error code will be generated whenever the pressure variation is too high.
- 7. Use the diagnostic software to check again all input and output signals.
- Check the system for error codes and solve these, if required.
 Check the petrol ECM for EOBD error codes.
 Place the protection connector on the VSI communication connector.
- 9. Take a test drive and check the drivability on LPG and petrol.

ATTENTION: please check, after activation of the AFC and switching the system to LPG, if DTC's are stored in the Prins diagnostic software.

If DTC's are stored, please contact our After Sales department for a software update in relation to the CAN-BUS compatibility. aftersales@prinsautogas.com
